STATISTIK ALAM SEKITAR

ENVIRONMENT STATISTICS

SELANGOR
2021

Pemakluman / *Announcement*:

Jabatan Perangkaan Malaysia sedang menjalankan Survei Pendapatan, Perbelanjaan Isi Rumah dan Kemudahan Asas (HIES/BA) 2022 bermula dari 1 Januari 2022 sehingga 31 Disember 2022.

The Department of Statistics Malaysia is conducting the Household Income, Expenditure and Basic Amenities Survey (HIES/BA) 2022 from 1st January 2022 to 31st December 2022.

Dimaklumkan bahawa Kerajaan Malaysia telah mengisytiharkan Hari Statistik Negara (MyStats Day) pada 20 Oktober setiap tahun. Tema sambutan MyStats Day adalah *"Connecting the World with Data We Can Trust"*

Please be informed that the Government of Malaysia has declared National Statistics Day (MyStats Day) on October 20 each year. MyStats Day theme is "Connecting the World with Data We Can Trust"

KATA PENGANTAR

Statistik Alam Sekitar, 2021 memaparkan statistik alam sekitar negeri Selangor yang meliputi enam komponen iaitu Keadaan dan Kualiti Alam Sekitar; Sumber Alam Sekitar dan Kegunaannya; Sisa; Kejadian Ekstrem dan Bencana; Penempatan Penduduk dan Kesihatan Persekitaran; dan Penglibatan, Pengurusan dan Perlindungan Alam Sekitar. Penyusunan statistik ini meliputi maklumat dan keadaan alam sekitar, impak aktiviti manusia ke atas alam sekitar dan langkah yang diambil bagi mengurangkan impak tersebut.

Statistik alam sekitar ini boleh digunakan oleh agensi kerajaan negeri, sektor swasta, ahli akademik serta individu sebagai rujukan dalam menjalankan penyelidikan dan penganalisisan di peringkat negeri. Rangka kerja yang digunakan dalam penerbitan ini adalah berdasarkan *Framework for the Development of Environment Statistics* (FDES), *United Nations* 2013.

Penerbitan ini mengandungi enam bahagian. Bahagian pertama membentangkan infografik statistik alam sekitar, diikuti dengan ringkasan penemuan mengikut komponen di bahagian kedua serta kotak artikel di bahagian ketiga. Bahagian keempat pula memuatkan jadual terperinci mengenai statistik alam sekitar. Lampiran dan glosari disertakan di bahagian kelima dan keenam bagi membantu pengguna memahami statistik dan terma alam sekitar yang digunakan.

Jabatan merakamkan setinggi-tinggi penghargaan atas kerjasama dan sumbangan yang diberikan oleh semua pihak dalam menjayakan penerbitan ini. Setiap maklum balas dan cadangan untuk penambahbaikan penerbitan ini pada masa akan datang amatlah dihargai.

DATO' SRI DR. MOHD UZIR MAHIDIN
Ketua Perangkawan Malaysia
April 2022

PREFACE

Environment Statistics, 2021 presents the environment statistics of Selangor which covers six components namely Environmental Conditions and Quality; Environmental Resources and their Use; Residuals; Extreme Events and Disasters; Human Settlements and Environmental Health; and Environmental Protection, Management and Engagement. The compilation of these statistics includes environment state and information, impacts of human activities on the environment and actions taken to minimise the impact.

These environment statistics can be used by state government agencies, private sectors, academicians and individuals as a reference to conduct research and analysis at the state level. The framework used in this publication is based on the Framework for the Development of Environment Statistics (FDES) United Nations 2013.

This publication consists of six parts. The first part focused on the infographics of environment statistics, followed by a summary of findings by component in the second part with the articles box at the third part. The fourth part contains detailed tables on environment statistics. Appendices and glossary covered in the fifth and sixth parts are to facilitate users in understanding the statistics and environment terms used.

The Department gratefully acknowledges the co-operation and contribution rendered by all parties in making this publication a success. Every feedback and suggestion towards improving future publications is highly appreciated.

DATO' SRI DR. MOHD UZIR MAHIDIN
Chief Statistician, Malaysia

RINGKASAN PENEMUAN

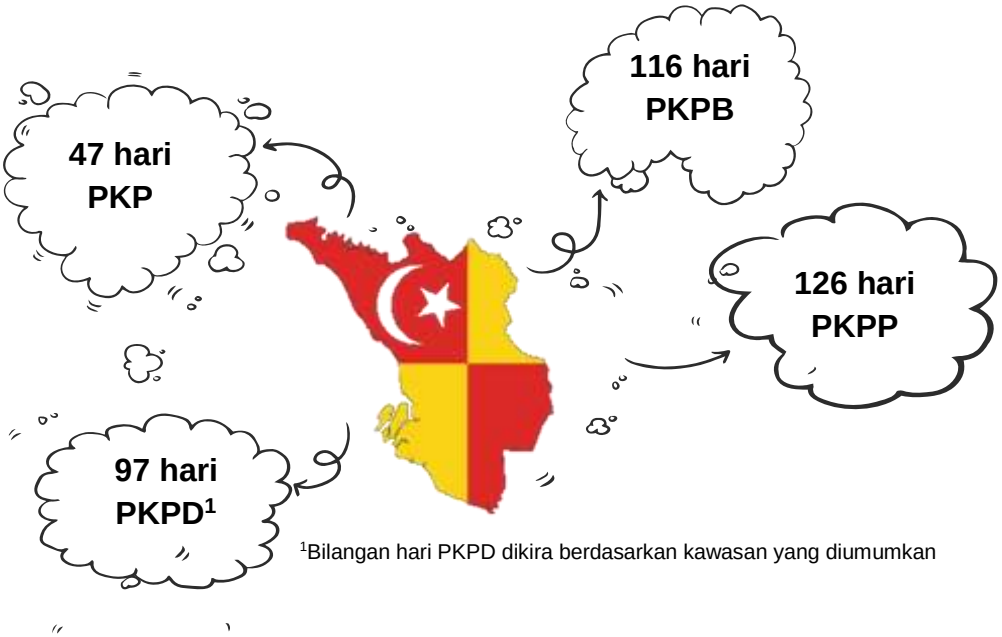
SUMMARY OF FINDINGS

Muka surat ini sengaja dibiarkan kosong

This page is deliberately left blank

Pengenalan

Pandemik COVID-19 telah mengubah landskap sosio-ekonomi dunia secara keseluruhan sejak virus ini dikesan pada penghujung 2019. Negeri Selangor juga tidak terkecuali dari menerima impak pandemik ini. Sehubungan itu, bagi mengawal penularan pandemik ini, Kerajaan mengambil langkah dengan melaksanakan Perintah Kawalan Pergerakan (PKP) pada Mac 2020. Apabila kes jangkitan menunjukkan penurunan, Kerajaan telah melaksanakan Perintah Kawalan Pergerakan Pemulihan (PKPP) dengan membenarkan perjalanan rentas negeri dan daerah sehingga Disember 2020. Namun perjalanan rentas sempadan negeri dan daerah adalah dilarang bagi kawasan yang diisytiharkan Perintah Kawalan Pergerakan Diperketatkan (PKPD) dan Perintah Kawalan Pergerakan Bersyarat (PKPB).



[1]Bilangan hari PKPD dikira berdasarkan kawasan yang diumumkan

Pelaksanaan PKP ini sedikit sebanyak telah memberi kesan kepada pertumbuhan ekonomi Selangor di mana pada tahun 2020 Keluaran Dalam Negara Kasar (KDNK) pada harga malar 2015 merekodkan RM326.8 bilion (2019: RM345.1 bilion) menyusut 5.3 peratus. KDNK Selangor menyumbang 24.3 peratus kepada KDNK Malaysia. Manakala KDNK per kapita adalah RM51,966 (2019: RM55,052). Ini berikutan pelaksanaan sekatan keseluruhan PKP di mana hanya sektor perkhidmatan perlu yang dibenarkan selama 47 hari berkuat kuasa 18 Mac 2020 hingga 3 Mei 2020.

Dari perspektif lain, PKP bukan sahaja membantu mengekang penularan COVID-19, tetapi memberi kesan positif kepada alam sekitar. Kesan positif ini boleh dilihat pada Indeks Pencemaran Udara (IPU), kadar kemalangan jalan raya serta kualiti air sungai.

A. Kualiti Alam Sekitar

Bahan pencemar udara merupakan bahan kimia di udara yang boleh membahayakan manusia dan alam sekitar. Bahan pencemar boleh berbentuk zarah pepejal, titisan cecair atau gas. Terdapat enam (6) bahan pencemar udara utama iaitu Ozon Permukaan Bumi (O_3), Karbon Monoksida (CO), Sulfur Dioksida (SO_2), Nitrogen Dioksida (NO_2) dan Habuk Halus (PM_{10} & $PM_{2.5}$). Pencemaran udara berlaku apabila bahan pencemar ini hadir di atmosfera. Punca dan kesan bahan pencemar udara ditunjukkan seperti di **Lampiran 3.**

Habuk Halus (PM_{10} & $PM_{2.5}$)

Habuk Halus (PM_{10} & $PM_{2.5}$) adalah istilah yang digunakan bagi zarah terampai berukuran kurang daripada diameter 10 dan 2.5 mikron. Zarah boleh berbentuk pepejal atau cecair dan ia termasuk aerosol, debu, asap dan debunga. Pembebasan PM_{10} dari ekzos kenderaan bermotor, penjanaan kuasa dan haba, proses perindustrian dan aktiviti pembakaran terbuka yang akan membawa kepada pencemaran udara serta mengancam kesihatan manusia dan tumbuhan.

Trend purata bulanan kepekatan PM_{10} dalam udara di Kedah sepanjang pelaksanaan PKP yang berkuatkuasa 18 Mac 2020 hingga 3 Mei 2020 (47 hari), PKPB (116 hari) dan PKPP (126 hari) menunjukkan paras terendah berbanding 2019. Semua stesen di Selangor menunjukkan penurunan PM_{10} kecuali pada bulan Mei dan Jun 2020 (Klang); Oktober hingga Dismber 2020 (Kuala Selangor); November dan Disember 2020 (Petaling Jaya).

Sumber: Jabatan Alam Sekitar

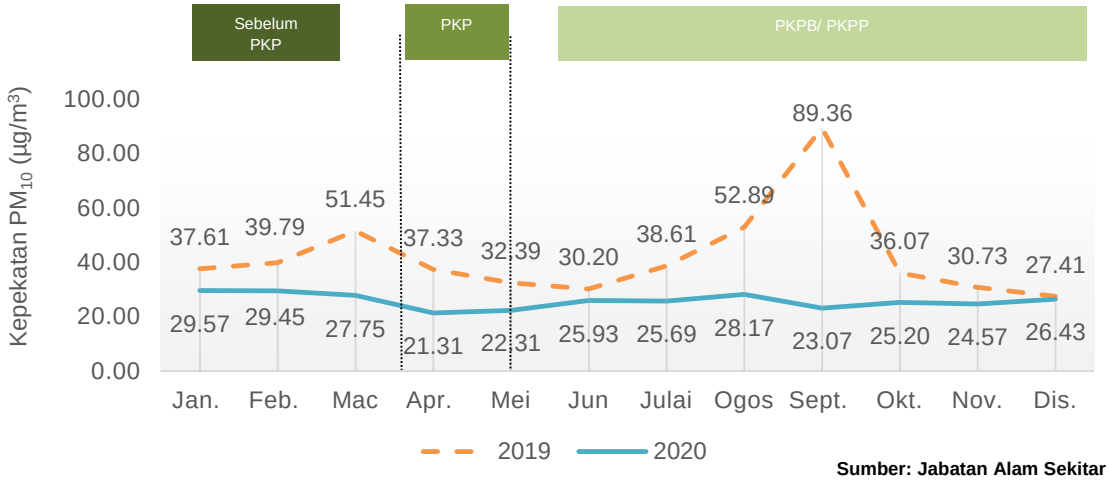
Carta 1.5: Purata bulanan kepekatan PM_{10} di udara, stesen Shah Alam, Selangor, 2019 dan 2020



Sumber: Jabatan Alam Sekitar

Pelaksanaan PKP turut memberi kesan yang positif kepada trend purata bulanan kepekatan $PM_{2.5}$ dalam udara di Selangor pada 2020 di mana $PM_{2.5}$ mencatatkan paras terendah semasa PKP berbanding 2019 kecuali pada bulan Mei dan Jun 2020 (Klang); November 2020 (Kuala Selangor); Disember 2020 (Banting); November dan Disember 2020 (Petaling Jaya).

Ozon permukaan bumi (O_3)

O_3 adalah bahan pencemar yang terjadi akibat daripada reaksi kimia dalam udara di antara sebatian organik meruap (VOC) dan nitrogen oksida (NO_x). VOC dan NO_x ini dihasilkan oleh punca kenderaan bermotor dan industri.

Trend purata bulanan kepekatan O_3 dalam udara menurun sepanjang pelaksanaan PKP. Secara amnya bacaan O_3 pada tahun 2020 adalah lebih rendah berbanding tahun 2019 kecuali pada bulan Julai 2020 (Banting); April hingga Ogos dan Oktober hingga Disember 2020 (Klang). Ini disebabkan pembukaan sektor ekonomi serta kelonggaran pergerakan rentas negeri semasa PKPB/PKPP telah meningkatkan pencemaran O_3.

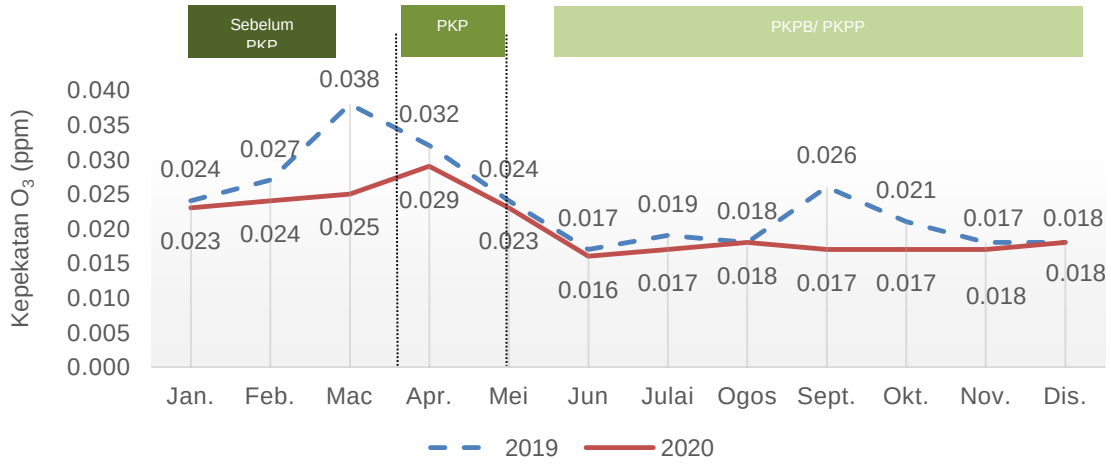
Carta 1.14: Purata bulanan kepekatan O_3 di udara, stesen Shah Alam, Selangor, 2019 dan 2020



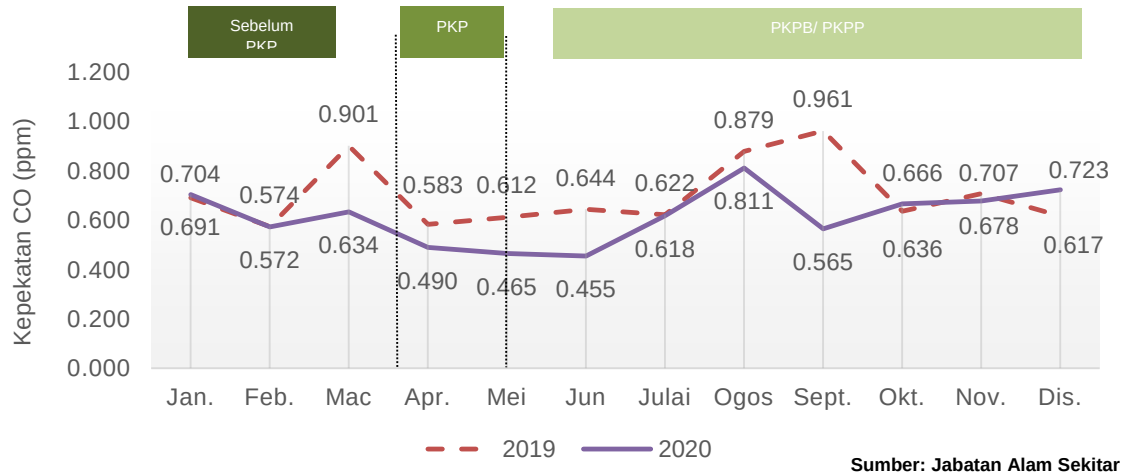
Sumber: Jabatan Alam Sekitar

Karbon Monoksida (CO)

CO merupakan gas yang tidak berwarna, tidak berbau dan beracun yang dihasilkan dari punca pembakaran bahan bakar fosil seperti asap kenderaan, proses perindustrian dan aktiviti pembakaran terbuka.

Trend purata bulanan kepekatan CO dalam udara sepanjang pelaksanaan PKP menunjukkan paras terendah di semua stesen berbanding 2019 disebabkan kawalan pengerakan rentas negeri dan bekerja dari rumah dengan secara tidak langsung mengurangkan penggunaan kenderaan. Namun begitu, pembukaan sektor ekonomi serta kebenaran rentas negeri menyebabkan peningkatan kepekatan CO terutama pada bulan Oktober dan Disember 2020 (Banting); Julai 2020 (Klang); dan Disember 2020 (Petaling Jaya).

Carta 1.15: Purata bulanan kepekatan CO di udara, stesen Banting, Selangor, 2019 dan 2020



Sumber: Jabatan Alam Sekitar

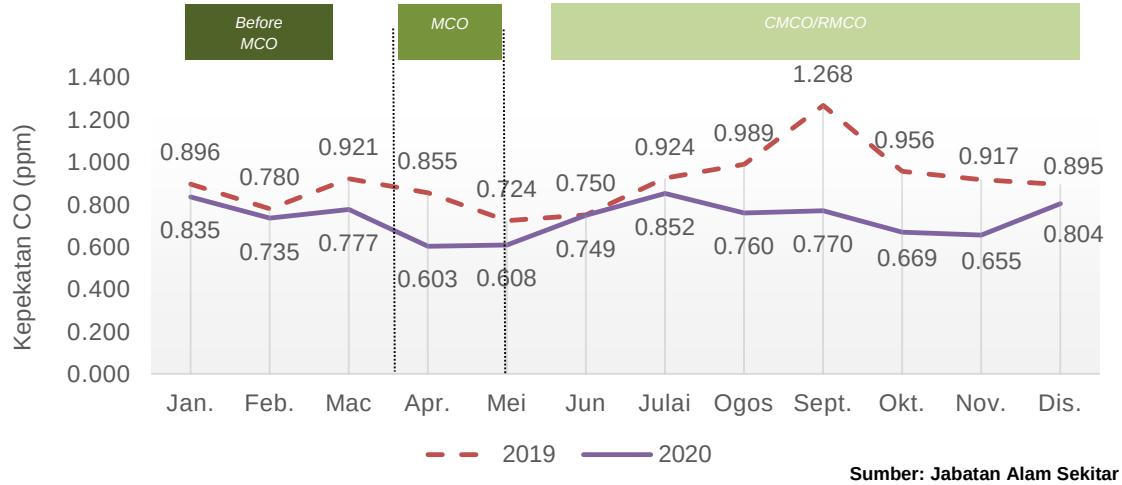
Carta 1.18: Purata bulanan kepekatan CO di udara, stesen Shah Alam, Selangor, 2019 dan 2020



Sumber: Jabatan Alam Sekitar

Sulfur Dioksida (SO_2)

SO_2 adalah sejenis gas reaktif yang mudah larut dalam air, tidak berwarna dan mempunyai bau yang tidak menyenangkan. Pendedahan yang berlebihan terhadap kepekatan tinggi SO_2 di udara menyebabkan kerosakan sistem pernafasan dan masalah komplikasi kardiovaskular.

Trend purata bulanan kepekatan SO_2 dalam udara sepanjang pelaksanaan PKP pada 2020 menurun berbanding 2019 kecuali pada bulan Jun, November dan Disember 2020 (Banting); Jun, September hingga Disember 2020 (Klang); Oktober 2020 (Petaling Jaya); September, Oktober dan Disember 2020 (Shah Alam).

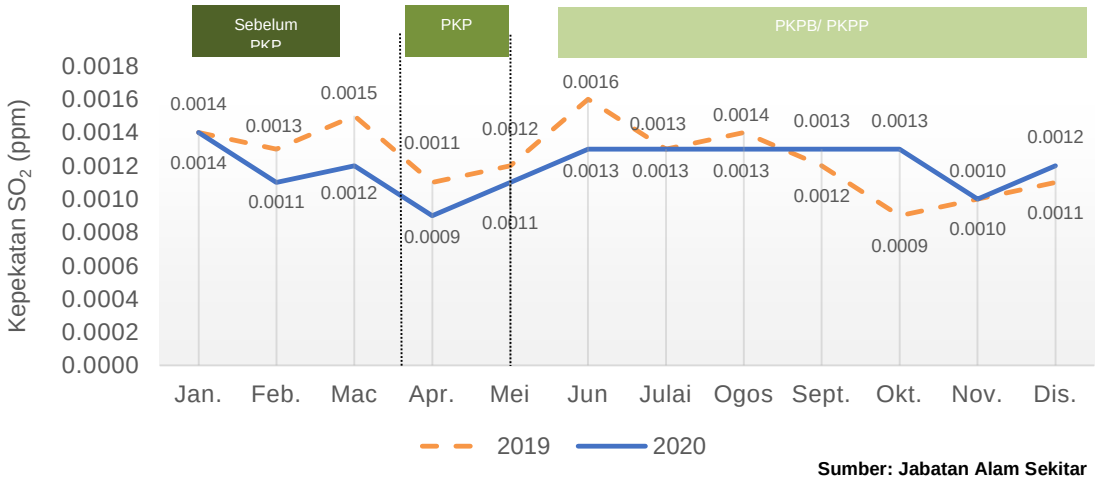
Carta 1.22: Purata bulanan kepekatan SO_2 di udara, stesen Shah Alam, Selangor, 2019 dan 2020



Sumber: Jabatan Alam Sekitar

Nitrogen Dioksida (NO_2)

NO_2 terbentuk di persekitaran udara melalui pengoksidaan Nitrogen Monoksida (NO). Gas bertoksik ini berwarna merah keperangan dan mempunyai bau yang kuat dan tajam.

Trend purata bulanan kepekatan NO_2 dalam udara pada tahun 2020 menunjukkan penurunan berbanding 2019 disebabkan pelaksanaan PKP kecuali pada bulan Disember 2020 (Banting); Jun dan Julai 2020 (Klang); Jun, Julai dan Disember 2020 (Petaling Jaya).

B. Purata suhu, hujan dan purata kelembapan relatif

Iklim Malaysia dikategorikan sebagai iklim khatulistiwa yang mempunyai suhu seragam, hujan yang banyak dan lembap sepanjang tahun. Iklim ini dipengaruhi oleh monsun Timur Laut yang bertiup dari bulan November hingga Mac dan monsun Barat Daya dari Mei hingga September. Pantai timur Semenanjung Malaysia dan kawasan pesisiran pantai Sabah dan Sarawak amat dipengaruhi oleh musim monsun Timur Laut. Manakala pantai barat Semenanjung Malaysia tidak dipengaruhi kerana dilindungi oleh banjaran gunung yang tinggi.

Selangor mempunyai tiga stesen meteorologi untuk memantau keadaan cuaca secara berterusan dan menyediakan data meteorologi untuk kegunaan ramalan cuaca. Stesen-stesen tersebut adalah KLIA, Sepang; Petaling Jaya dan Subang.

Purata suhu

Stesen Subang mencatatkan purata suhu tertinggi iaitu 33.5°C, menurun 0.1°C berbanding 33.6°C pada 2019. Manakala stesen KLIA, Sepang pula merekodkan purata suhu terendah iaitu 24.8°C, suhu yang sama direkodkan pada 2019. **[Paparan 1.1]**

Paparan 1.1: Purata suhu di stesen meteorologi, Selangor, 2019 dan 2020

2019		Stesen meteorologi	2020	
Maks.	Min.		Maks.	Min.
32.9°C	24.8°C	KLIA, Sepang	32.5°C	24.8°C
33.5°C	25.5°C	Petaling Jaya	33.3°C	25.5°C
33.6°C	24.9°C	Subang	33.5°C	25.1°C

Sumber: Jabatan Meteorologi Malaysia

Taburan hujan

Stesen Petaling Jaya merekodkan hujan tahunan tertinggi pada 2020 iaitu 3,817.00 mm berbanding tahun sebelumnya (3,673.20 mm). Stesen KLIA, Sepang pula mencatatkan hujan tahunan terendah iaitu 1,875.70 mm pada 2019 berbanding tahun 2020 iaitu 2,364.60 mm. **[Paparan 1.2]**

Paparan 1.2: Jumlah dan bilangan hari hujan di stesen meteorologi, Selangor, 2019 dan 2020

2019		Stesen meteorologi	2020	
Jumlah (mm)	Bilangan hari		Jumlah (mm)	Bilangan hari
1,875.7	154	KLIA, Sepang	2,364.6	179
3,673.2	214	Petaling Jaya	3,817.0	212
3,138.6	200	Subang	3,236.0	206

Sumber: Jabatan Meteorologi Malaysia

Purata kelembapan relatif

Purata kelembapan relatif di Selangor adalah di antara 72.5 peratus (Petaling Jaya) dan 79.2 peratus (KLIA, Sepang) pada 2020. Walau bagaimanapun, bacaan ini meningkat berbanding 2019 iaitu antara 71.8 peratus (Petaling Jaya) dan 79.1 peratus (Subang). **[Paparan 1.3]**

Paparan 1.3: Purata kelembapan relatif di stesen meteorologi, Selangor, 2019 dan 2020

2019	Stesen meteorologi	2020
Peratus (%)		Peratus (%)
77.2	KLIA, Sepang	79.2
71.8	Petaling Jaya	72.5
79.1	Subang	78.5

Sumber: Jabatan Meteorologi Malaysia

C. Status kualiti udara

Udara merupakan campuran beberapa gas yang membentuk atmosfera bumi. Ia terhasil terutamanya daripada nitrogen (lebih kurang 78.0%), oksigen (lebih kurang 21.0%) dan gas-gas lain (lebih kurang 1.0%). Udara amat penting dalam kehidupan di mana kita menggunakannya untuk pembakaran bahan api bagi tujuan pemanasan, pengangkutan, penjanaan kuasa dan lain-lain.

Indeks Pencemaran Udara

Jabatan Alam Sekitar (JAS) memantau kualiti udara negara melalui 65 stesen pengawasan yang ditempatkan di seluruh negara bagi mengawasi dan mengesan sebarang perubahan kualiti udara yang boleh memberi kesan negatif kepada kesihatan manusia dan alam sekitar.

Status kualiti udara di Malaysia dilaporkan dalam Indeks Pencemaran Udara (IPU). Bahan pencemar udara yang digunakan untuk mengira IPU adalah Ozon (O_3), Karbon Monoksida (CO), Nitrogen Dioksida (NO_2), Sulfur Dioksida (SO_2) dan Habuk Halus bersaiz kurang dari 10 mikron (PM_{10}) dan bersaiz kurang dari 2.5 mikron ($PM_{2.5}$).

Status Indeks Pencemaran Udara (IPU)

IPU	Status IPU
0-50	Baik
51-100	Sederhana
101-200	Tidak Sihat
201-300	Sangat Tidak Sihat
>300	Berbahaya

Sepanjang pelaksanaan PKP, Selangor secara keseluruhannya merekodkan kualiti udara berstatus “baik” dan “sederhana” bagi tahun 2020. Stesen Kuala Selangor mencatatkan bilangan hari tertinggi (68 hari) kualiti udara berstatus “baik” pada 2020 berbanding 39 hari tahun sebelumnya. Bacaan IPU menunjukkan penurunan paras pencemar udara, khususnya di bandar-bandar utama di seluruh negeri disebabkan pelepasan bahan pencemar ke udara yang lebih rendah seperti asap kenderaan bermotor, pelepasan asap cerobong industri dan aktiviti pembakaran terbuka. **[Paparan 1.4]**

Paparan 1.4: Status kualiti udara[1] mengikut stesen, Selangor, 2019 dan 2020

Bilangan hari

Stesen	Tahun	Baik (0-50)	Sederhana (51-100)	Tidak Sihat (101-200)	Sangat Tidak Sihat (201-300)	Berbahaya (>300)

Sumber: Jabatan Alam Sekitar

D. Sumber air

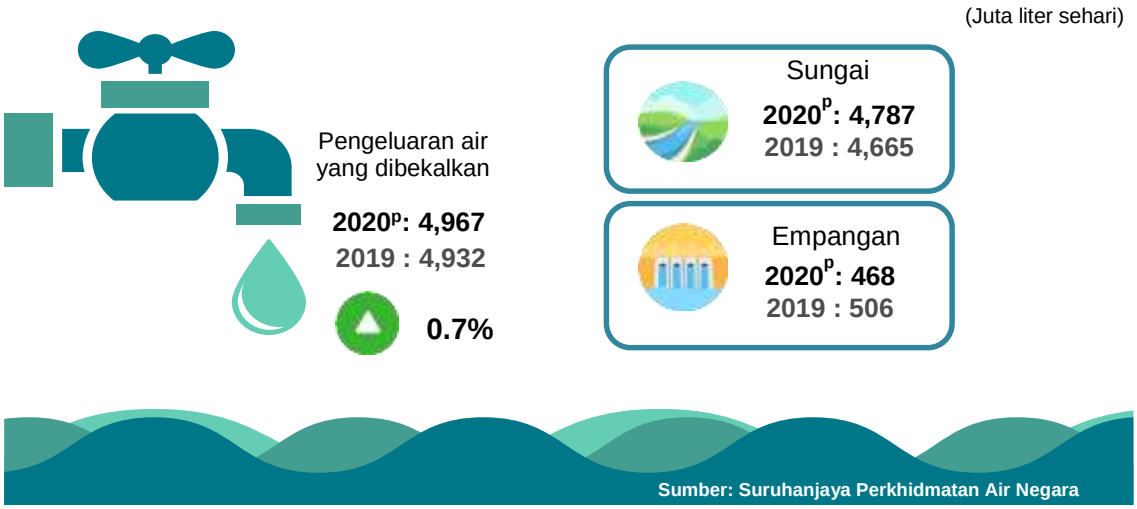
Air merupakan sumber asas utama yang penting kepada kehidupan manusia, aktiviti sosio ekonomi seperti aktiviti perindustrian, akuakultur, pengangkutan, pertanian serta penjanaan kuasa. Malaysia memiliki taburan hujan yang banyak serta jaringan sungai yang meluas sebagai sumber air negara. Permintaan terhadap air telah meningkat seiring dengan pertumbuhan penduduk dan peningkatan taraf hidup. Masalah kekurangan air perlu diatasi memandangkan ia boleh menjejaskan aktiviti manusia dan ekonomi. Oleh itu, pengurusan sumber air hendaklah diberi perhatian supaya dapat memenuhi permintaan pengguna yang semakin meningkat.

Sumber air didefinisikan sebagai sumber yang boleh diperoleh untuk kegunaan manusia dan alam sekitar merangkumi sungai, tasik, air bawah tanah, air laut dan sumber air yang lain.

Di Malaysia, 97.0 peratus bekalan air adalah daripada air permukaan manakala selebihnya daripada air bawah tanah. Air bawah tanah berperanan sebagai sumber air alternatif terutama di kawasan tiada bekalan air atau bekalan air tidak mencukupi.

Sumber bekalan air mentah di Selangor adalah diabstrak dari sungai dan empangan. Pada 2020, jumlah bekalan air mentah yang diabstrak adalah sebanyak 5,255 juta liter sehari (JLH) di mana sungai menyumbang 91.1 peratus manakala selebihnya daripada empangan. Pengeluaran air yang dibekalkan di Selangor adalah sebanyak 4,967 JLH pada 2020, meningkat 0.7 peratus berbanding 4,932 JLH yang dicatatkan pada 2019. **[Paparan 1.5]**

Paparan 1.5: Pengeluaran air yang dibekalkan dan bekalan air mentah diabstrak mengikut sumber, Selangor, 2019 dan 2020



Sektor domestik merujuk kepada air yang digunakan oleh isi rumah untuk menjalankan aktiviti harian seperti membasuh pinggan mangkuk, memasak, mencuci pakaian, mandi, menyiram tanaman dan lain-lain. Manakala, sektor bukan domestik pula merujuk kepada air yang digunakan untuk tujuan komersil, perindustrian, penggunaan awam pertanian dan penternakan.

Penggunaan air bagi sektor domestik di Malaysia meningkat seiring dengan pelaksanaan PKP pada 2020 memandangkan lebih ramai penduduk Malaysia telah bekerja dari rumah. Sementara itu, penggunaan air bermeter bagi sektor domestik negeri Selangor juga menunjukkan peningkatan sebanyak 8.6 peratus dan sektor bukan domestik menurun sebanyak 6.6 peratus pada 2020 berbanding 2019. **[Paparan 1.6]**

Paparan 1.6: Penggunaan air bermeter mengikut sektor, Selangor, 2019 dan 2020

(Juta liter sehari)

E. Buangan klinikal

Buangan klinikal merujuk kepada buangan yang terdiri daripada keseluruhan atau sebahagian tisu manusia, darah atau bendalir badan, bahan kumuh, ubat-ubatan, produk farmaseutikal dan lain-lain. Ia diklasifikasikan sebagai buangan terjadual di bawah Jadual Pertama Peraturan Kualiti Alam Sekeliling (Buangan Terjadual), 2005.

Pandemik COVID-19 memberi kesan secara langsung ke atas buangan klinikal disebabkan penggunaan peralatan perlindungan diri (PPE) dan peralatan ujian COVID-19 dalam pengendalian pesakit COVID-19 di kemudahan kesihatan dan pusat kuarantin. Selangor mencatatkan 9,703.4 tan metrik buangan klinikal pada 2020 berbanding 7,343.2 tan metrik yang direkodkan pada 2019. **[Paparan 1.7]**

Paparan 1.7: Kuantiti buangan klinikal, Selangor, 2019 dan 2020

(Tan metrik)

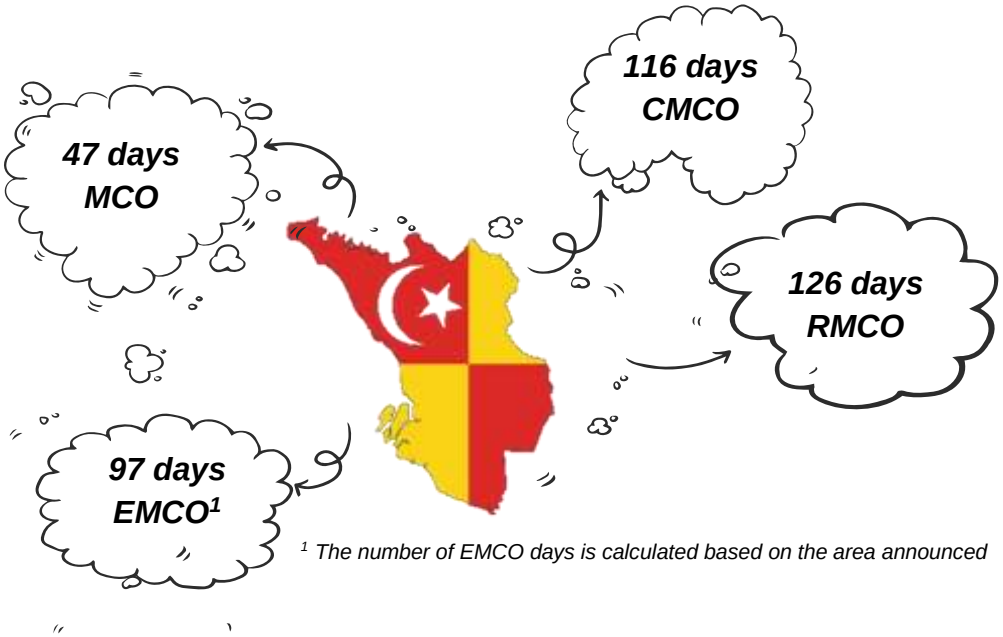
Introduction

COVID-19 pandemic has changed the world socioeconomic landscape as a whole since the virus was detected in late 2019. Selangor also experienced the effects of this pandemic. Therefore, to control the spread of the pandemic, the government had taken measures by implementing the Movement Control Order (MCO) in March 2020. When cases of infection showed a decline, the government implemented the Recovery Movement Control Order (RMCO) by allowing cross-country travel and districts until December 2020. However, travel across states and districts for areas of Enhanced Movement Control Order (EMCO) and the Conditional Movement Control Order (CMCO) were prohibited.



[1] *The number of EMCO days is calculated based on the area announced*

The implementation of the MCO has affected the Selangor's economic growth whereby in 2020 Gross Domestic Product (GDP) at a constant 2015 price RM326.8 billion (2019: RM345.1 billion) decline 5.3 per cent. Selangor's GDP contributes 24.3 per cent to Malaysia's GDP. Meanwhile, the GDP per capita was RM51,966 (2019: RM55,052). This was due to the implementation of total lockdown whereby only essential sectors were allowed to operate throughout the MCO which applied for 47 days since 18th March 2020 to 3rd May 2020.

From another perspective, MCO had not only curbed the spread of COVID-19, but had a positive impact on the environment. The positive effect can be seen in the Air Pollution Index (API), road accident rate and river water quality.

.

A. Environmental Quality

Air pollutants are chemical substances in the air that can be harmful to human beings and the environment. Pollutants can be in the form of solid particles, liquid droplets or gases. There are six (6) primary pollutants namely Ground Level Ozone (O_3), Carbon Monoxide (CO), Sulphur Dioxide (SO_2), Nitrogen Dioxide (NO_2) and Particulate Matter (PM_{10} & $PM_{2.5}$). Air pollution occurs when these pollutants are present in the atmosphere. The sources and effects of air pollutants are shown in ***Appendix 3****.*

Particulate Matter (PM_{10} & $PM_{2.5}$)

Particulate Matter (PM_{10} & $PM_{2.5}$) is the term used to describe respirable particles of less than 10 and 2.5 micron in diameter. Particles may be solid or liquid and includes aerosol, dust, smoke and pollen. Emission of PM_{10} from motor vehicle exhausts, heat and power generation, industrial processes and open burning activities will lead to air pollution and endangered human health and plants.

The monthly average trend concentration of PM_{10} in the Selangor air declined during the implementation of MCO effective 18th March 2020 to 3rd May 2020 (47 days), CMCO (116 days) and RMCO (126 days) showed its lowest at all stations as compared to 2019. All stations in Selangor showed a decrease in PM_{10} except in May and June 2020 (Klang); October to December 2020 (Kuala Selangor); November and December 2020 (Petaling Jaya).

Source: Department of Environment

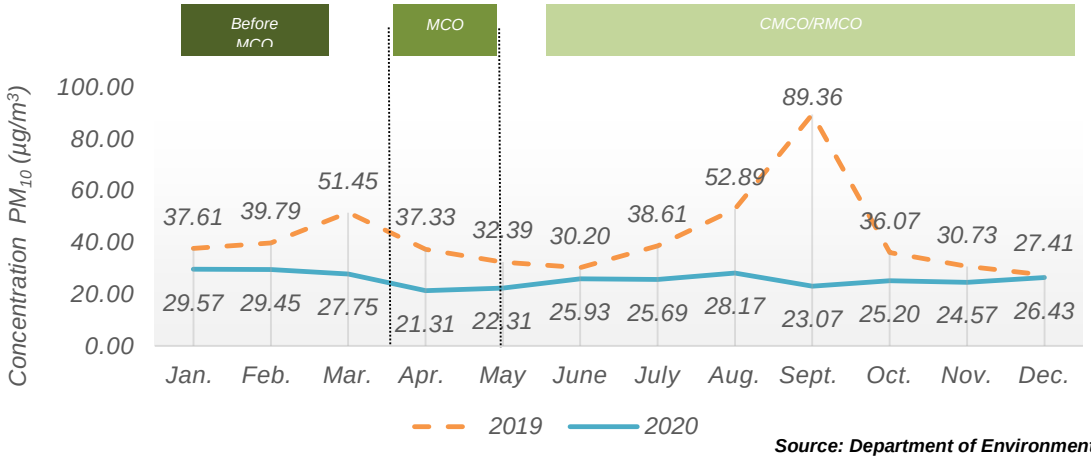
Chart 1.5: Monthly average concentration of PM_{10} in the air, Shah Alam station, Selangor, 2019 and 2020



Source: Department of Environment

The implementation of MCO also had a positive impact on the monthly average trend of $PM_{2.5}$ concentration in the air in Selangor in 2020 where $PM_{2.5}$ recorded the lowest level during MCO as compared to 2019 except in May and June 2020 (Klang); November 2020 (Kuala Selangor); December 2020 (Banting); November and December 2020 (Petaling Jaya).

Ground level ozone (O_3)

O_3 is a pollutant formed by the chemical reaction in the air between volatile organic compounds (VOCs) and nitrogen oxide (NOx). These VOCs and NOx are produced by motor vehicles and industrial sources.

The monthly average trend of O_3 concentration in air decline throughout the implementation of MCO. In general, the O_3 reading in 2020 is lower than in 2019 except in July 2020 (Banting); April to August and October to December 2020 (Klang). This is due to the opening of the economic sector as well as the relaxation of cross-state movements during CMCO/RMCO causing an increase pollution in O_3.

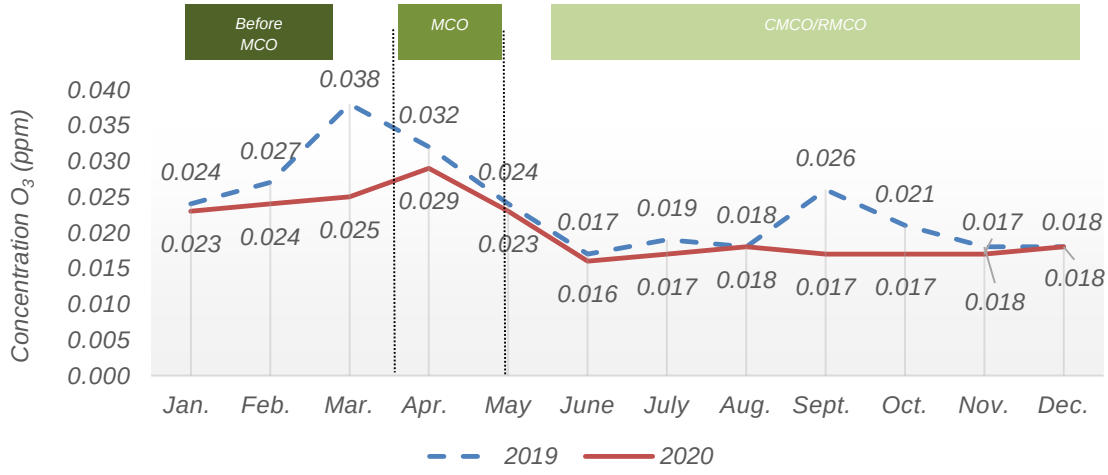
Chart 1.14: Monthly average concentration of O_3 in the air, Shah Alam station, Selangor, 2019 and 2020



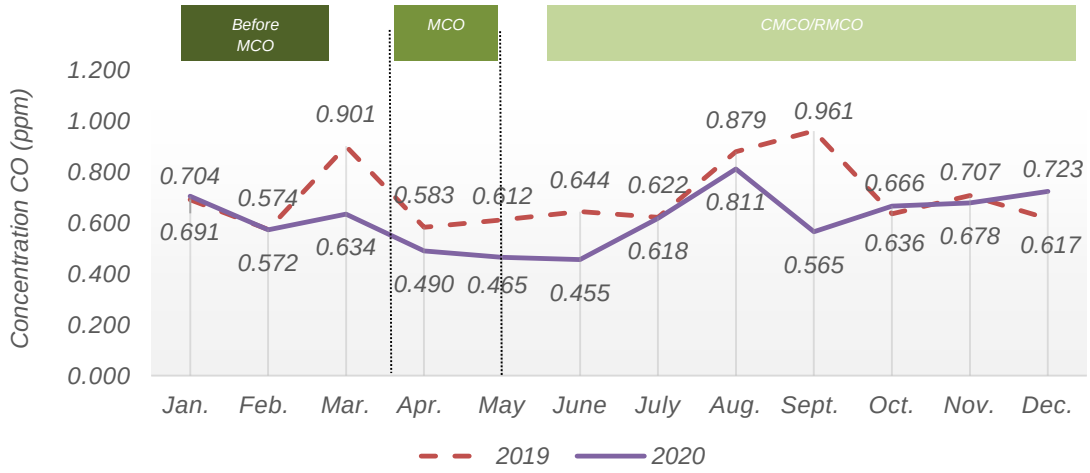
Source: Department of Environment

Carbon Monoxide (CO)

CO is a colourless, odourless and toxic gas produced from fossil fuel combustion sources such as vehicle exhaust, industrial processes and open burning activities.

The monthly average trend of CO concentration in the air throughout MCO implementation showed the lowest level at all stations as compared to 2019 due to cross-state mobility control and working from home by indirectly reducing vehicle usage. However, the opening up of the economic sector as well as cross-state permits led to an increase in CO concentrations especially in October and December 2020 (Banting); July 2020 (Klang); and December 2020 (Petaling Jaya).

Chart 1.15: Monthly average concentration of CO in the air, Banting station, Selangor, 2019 and 2020



Source: Department of Environment

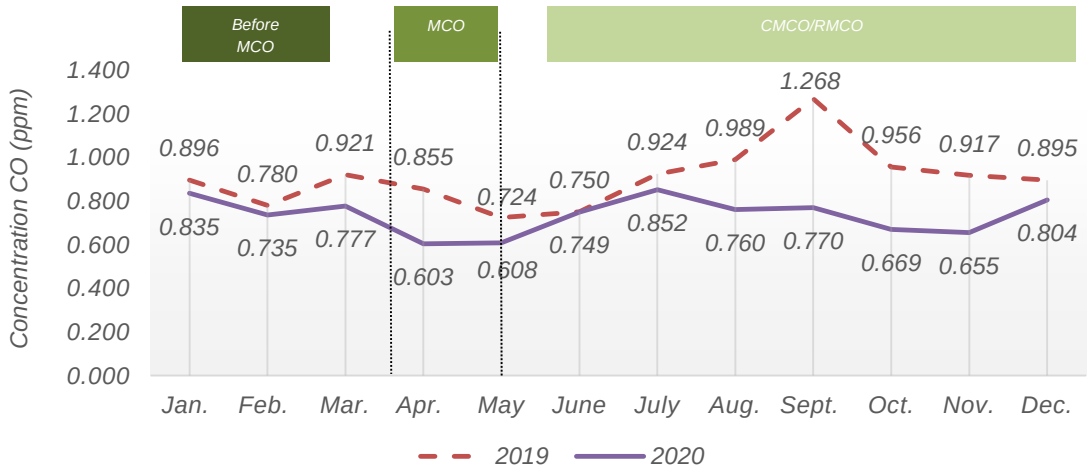
Chart 1.18: Monthly average concentration of CO in the air, Shah Alam station, Selangor, 2019 and 2020



Source: Department of Environment

Sulphur Dioxide (SO_2)

SO_2 is colourless, water-soluble reactive gas with an irritating odour. Excessive exposure to high concentration of SO_2 in the atmosphere causes respiratory illnesses and complications to existing cardiovascular problems.

The monthly average trend concentration of SO_2 in the air during the implementation of MCO in 2020 declined as compared to 2019 except in June, November and December 2020 (Banting); June, September to December 2020 (Klang); October 2020 (Petaling Jaya); September, October and December 2020 (Shah Alam).

Source: Department of Environment

Nitrogen Dioxide (NO_2)

NO_2 is formed in the ambient air through the oxidation of Nitrogen Monoxide (NO). This reddish brown toxic gas has a sharp and pungent odour.

The monthly average trend of NO_2 concentration in the air in 2020 showed a decrease as compared to 2019 due to the implementation of MCO except in December 2020 (Banting); June and July 2020 (Klang); June, July and December 2020 (Petaling Jaya).

B. Mean temperature, rainfall and mean relative humidity

Malaysia's climate is categorised as equatorial, has a uniform temperature, copious rainfall and humid throughout the year. This climate is influenced by the Northeast monsoon blows from November to March and the Southwest monsoon from May to September. The east coast of Peninsular Malaysia and the coastal areas of Sabah and Sarawak are strongly influenced by the Northeast monsoon season however, the west coast of Peninsular Malaysia is not affected because it is protected by the soaring mountain ranges.

Selangor has three meteorological stations to monitor the weather conditions continuously and provide meteorological data which are used in weather forecasting. The stations are KLIA, Sepang; Petaling Jaya and Subang.

Mean temperature

Subang station recorded the highest average temperature of 33.5°C, a decrease of 0.1°C as compared to 33.6°C in 2019. Meanwhile, KLIA, Sepang station recorded the lowest average temperature of 24.8°C, same as recorded in 2019. ***[Exhibit 1.1]***

Exhibit 1.1: Mean temperature at meteorological stations, Selangor, 2019 and 2020

2019		Meteorological stations	2020	
Max.	Min.		Max.	Min.
32.9°C	24.8°C	KLIA, Sepang	32.5°C	24.8°C
33.5°C	25.5°C	Petaling Jaya	33.3°C	25.5°C
33.6°C	24.9°C	Subang	33.5°C	25.1°C

Source: Malaysia Meteorological Department

Rainfall distribution

Petaling Jaya station recorded the highest annual rainfall in 2020 at 3,817.00 mm as compared to the previous year (3,673.20 mm). KLIA, Sepang station recorded the lowest annual rainfall of 1,875.70 mm in 2019 as compared to 2020 at 2,364.60 mm. ***[Exhibit 1.2]***

Exhibit 1.2: Total and number of rainfall days at meteorological stations, Selangor, 2019 and 2020

2019		Meteorological stations	2020	
Total (mm)	No. of days		Total (mm)	No. of days
1,875.7	154	KLIA, Sepang	2,364.6	179
3,673.2	214	Petaling Jaya	3,817.0	212
3,138.6	200	Subang	3,236.0	206

Source: Malaysia Meteorological Department

Mean relative humidity

The mean relative humidity in Selangor was between 72.5 per cent (Petaling Jaya) and 79.2 per cent (KLIA, Sepang) in 2020. However, this reading increased as compared to 2019 which is between 71.8 per cent (Petaling Jaya) and 79.1 per cent (Subang). ***[Exhibit 1.3]***

Exhibit 1.3: Mean relative humidity at meteorological stations, Selangor, 2019 and 2020

2019 Percentage (%)	Meteorological stations	2020 Percentage (%)
77.2	KLIA, Sepang	79.2
71.8	Petaling Jaya	72.5
79.1	Subang	78.5

Source: Malaysia Meteorological Department

C. Air quality status

Air is the mixture of gases which make up the earth's atmosphere. It is mainly composed of nitrogen (about 78.0%), oxygen (about 21.0%) and other gases (about 1.0%). Air is essential for life as we use it to burn fuels for heating, transportation, power generation and others.

Air Pollution Index

The Department of Environment (DOE) monitors the country's ambient air quality through 65 monitoring stations that are located throughout the country to monitor and to detect any significant change in the air quality that can contribute to the negative impact to human health and the environment.

The status of air quality in Malaysia is reported as the Air Pollutant Index (API). The air pollutants used in computing the API are Ozone (O_3), Carbon Monoxide (CO), Nitrogen Dioxide (NO_2) Sulphur Dioxide (SO), Particulate Matter of less than 10 microns in size (PM_{10}) and Particulate Matter of less than 2.5 microns in size ($PM_{2.5}$).

Status of Air Pollution Index (API)

API	API Status
0-50	Good
51-100	Moderate
101-200	Unhealthy
201-300	Very Unhealthy
>300	Hazardous

During the implementation of the MCO, Selangor in overall recorded a "good" and "moderate" air quality status for 2020. Kuala Selangor station recorded the highest number of days (68 days) with "good" air quality in 2020 as compared to 39 days the previous year. API reading showed a decrease in the air pollutants levels, especially in major cities across the country due to lower air pollutant emissions such as motor vehicles smoke, industrial chimney emissions and open burning activities. ***[Exhibit 1.4]***

Exhibit 1.4: Status of air quality[1] by station, Selangor, 2019 and 2020

Number of days

Station	Year	Good (0-50)	Moderate (51-100)	Unhealthy (101-200)	Very Unhealthy (201-300)	Hazardous (>300)

D. Water resources

Water is very essential to human beings, socioeconomic activities such as industrial activities, aquaculture, transportation, agriculture and generation of energy. Malaysia has an abundant rainfall and an extensive river system as national water resources. The water demand has increased as the population grows and improvements in the standard of living. Water shortage should be overcome since it would affect human and economic activities. As such, the management of water resources should be addressed in order to meet the increasing demand.

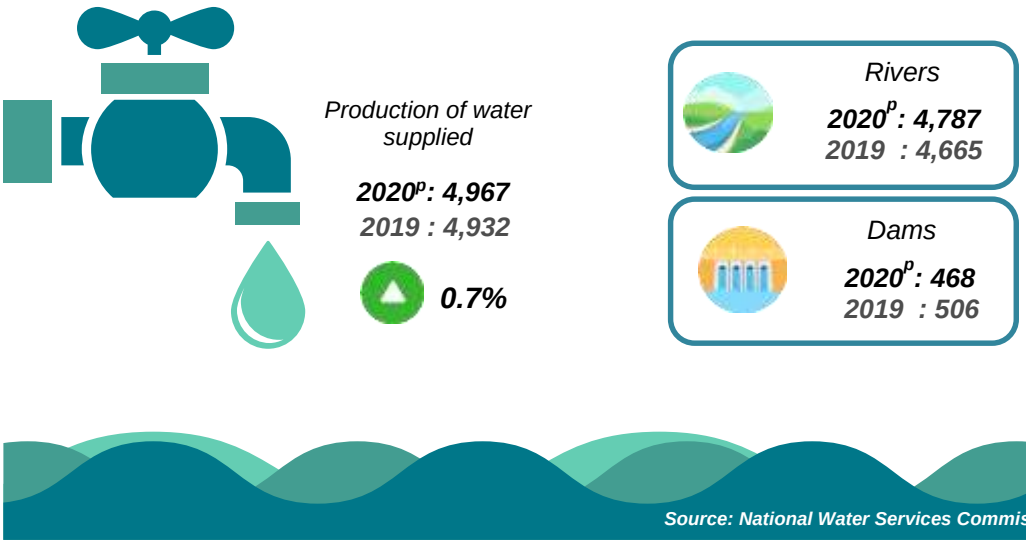
Water resources are resources acquired for human consumption and the environment comprising rivers, lakes, groundwater, seawater and other sources.

In Malaysia, 97.0 per cent of water supply is from surface water while the remaining is from groundwater. Groundwater is an alternative source of water, especially in areas where surface water supply is inadequate or unavailable.

The sources of abstracted raw water supply in Selangor are from rivers and dams. In 2020, the total of abstracted raw water supply is 5,255 million litres per day (MLD) where rivers account for 91.1 per cent while the rest is from dams. Volume production of water supplied in Selangor was 4,967 MLD in 2020, an increase of 0.7 per cent as compared to 4,932 MLD recorded in 2019. ***[Exhibit 1.5]***

Exhibit 1.5: Production of water supplied and supply of abstracted raw water by source, Selangor, 2019 and 2020

(Million litres per day)

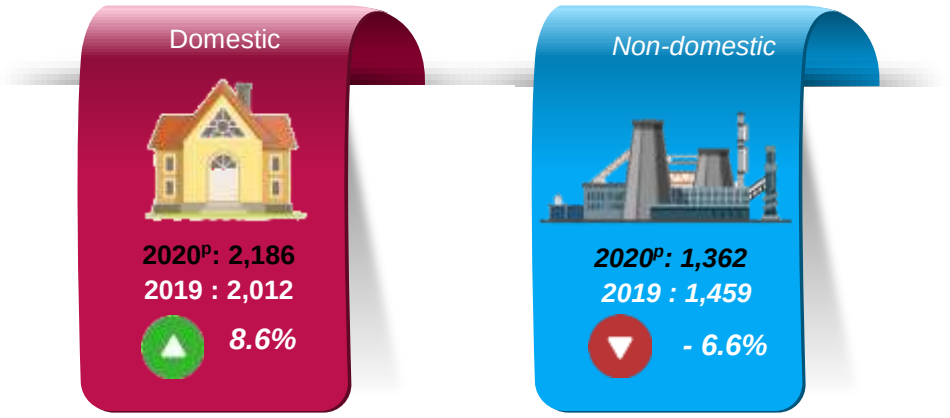


The domestic sector refers to water used by households to carry out daily activities such as washing dishes, cooking, washing clothes, bathing, watering plants and others. Meanwhile, the non-domestic sector refers to water used for commercial, industrial and general use in agriculture and livestock.

The increase in water consumption for the domestic sector in Malaysia is in line with the implementation of the MCO in 2020 as more Malaysians worked from home. Meantime, metered water consumption for the domestic category in Selangor also showed an increase of 8.6 per cent and non-domestic decreased by 6.6 per cent in 2020 as compared to 2019 ***[Exhibit 1.6]***

Exhibit 1.6: Metered water consumption by sector, Selangor, 2019 and 2020

(*Million litres per day*)



Source: National Water Services Commission

E. Clinical waste

Clinical waste refers to any waste which consists wholly or partly of human tissues, blood or body fluids, excretions, drugs or pharmaceutical products and others. It is classified as scheduled waste under the First Schedule Environmental Quality (Scheduled Wastes) Regulations, 2005.

The COVID-19 pandemic had a direct impact on clinical waste due to the use of personal protective equipment (PPE) and COVID-19 test equipment in the handling of COVID-19 patients in health facilities and quarantine centers. Selangor recorded 9,703.4 metric tonnes of clinical waste in 2020 as compared to 7,343.2 metric tonnes recorded in 2019. ***[Exhibit 1.7]***

Taburan hujan di Selangor, 1995-2020

Pengenalan

Perubahan iklim dunia mutakhir ini banyak mempengaruhi corak dan taburan hujan sama ada pada skala tempatan mahupun global. *Intergovernmental Panel on Climate Change* (IPCC) pada tahun 2007 melaporkan bahawa telah berlaku peningkatan terhadap jumlah hujan di bahagian atau kawasan yang terletak di latitud 30º U dari tahun 1900 hingga 2005. Sementara itu, berlaku pula pengurangan terhadap jumlah hujan yang turun di kawasan tropika sejak tahun 1970-an.

Iklim Malaysia

Malaysia terletak di zon khatulistiwa dan mengalami iklim panas dan lembap. Pada amnya, ia mempunyai suhu seragam, kelembapan tinggi dan hujan yang banyak. Walaupun tiupan angin di Malaysia pada amnya lemah dan terdapat perubahan bertempoh dalam corak tiupan angin. Berdasarkan kepada perubahan ini, empat musim boleh dibezakan iaitu monsun Timur Laut (November-Mac), monsun Barat Daya (Mei-September) dan dua musim peralihan monsun (Mac-Mei & Oktober-November) yang lebih pendek[1].

Taburan Hujan

Corak tiupan angin bermusim bersama sifat topografi lokal menentukan corak taburan hujan di Malaysia. Semasa musim timur laut, kawasan yang terdedah seperti kawasan Pantai Timur Semenanjung Malaysia, kawasan Barat Sarawak dan kawasan Pantai Timur Laut Sabah mengalami beberapa tempoh hujan lebat. Sebaliknya, kawasan pendalaman atau kawasan yang dilindungi banjaran gunung adalah secara relatifnya bebas dari pengaruh ini.

Penemuan

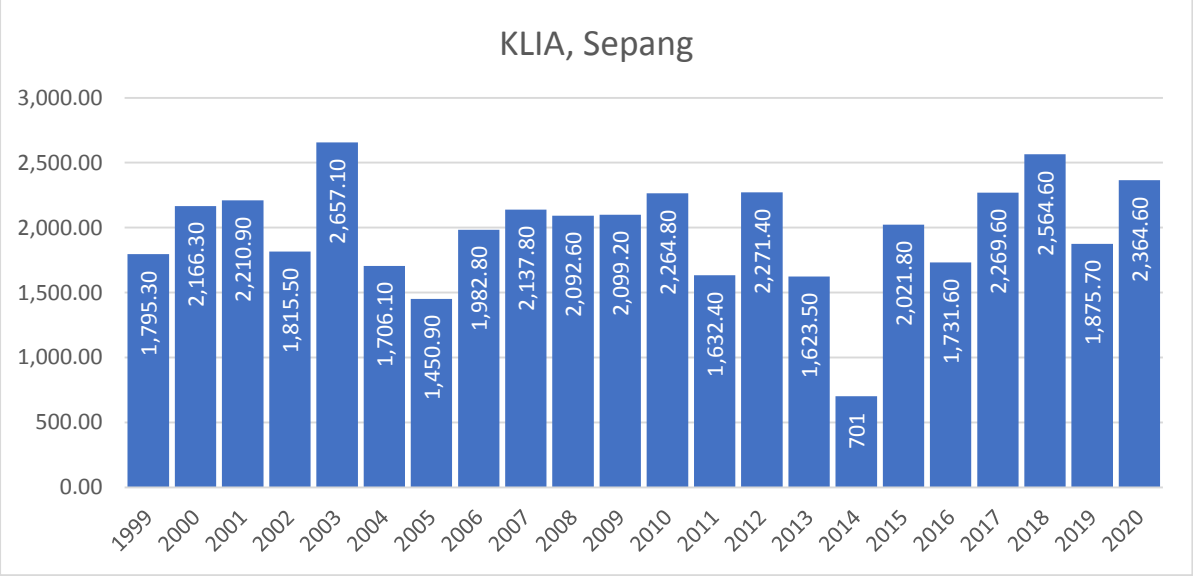
Kajian dan analisis taburan hujan tahunan adalah bertujuan untuk melihat trend taburan hujan berdasarkan perubahan iklim dan musim di negeri Selangor. Selain itu, hasil kajian boleh digunakan dalam merangka pengurusan kepada penggunaan air di Selangor bagi mengenalpasti sumber air dan kitarannya. Selangor mempunyai tiga stesen meteorologi berperanan untuk mengawasi keadaan cuaca secara berterusan dan menyediakan data

[1] Portal Jabatan Meteorologi Malaysia, www.met.gov.my

meteorologi untuk kegunaan ramalan cuaca. Stesen-stesen tersebut adalah KLIA, Sepang; Petaling Jaya dan Subang. Rekod taburan hujan kawasan kajian daripada tiga buah stesen Jabatan Meteorologi Malaysia selama 26 tahun (1995 hingga 2020) telah dikumpulkan dan dianalisis mengikut jumlah hujan tahunan seperti yang ditunjukkan dalam Carta 1.1 hingga 1.3. Berdasarkan kajian, perubahan peratusan tahunan taburan hujan di stesen KLIA, Sepang menunjukkan peningkatan tertinggi sebanyak 31.7 peratus diikuti stesen Petaling Jaya sebanyak 27.3 peratus dan di stesen Subang sebanyak 16.4 peratus.

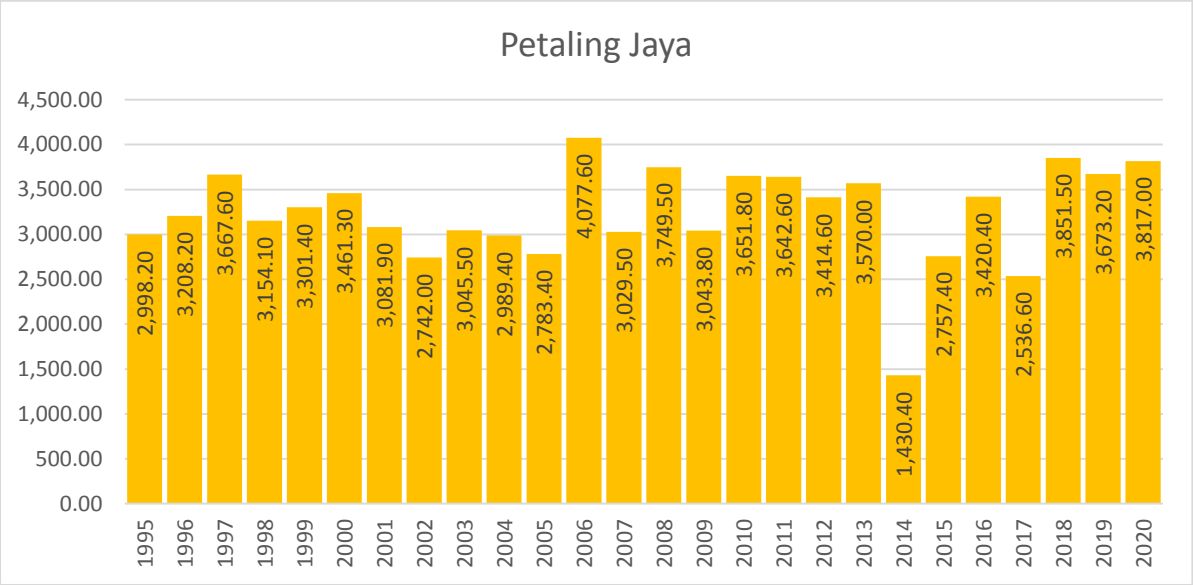
Jumlah hujan tahunan di stesen meteorologi KLIA, Sepang dari tahun 1999 hingga 2020 ditunjukkan dalam Carta 1.1. Jumlah hujan tahunan terendah direkodkan pada tahun 2014 iaitu 701.00 mm dan tertinggi pada tahun 2003 iaitu 2,657.10 mm. Purata hujan tahunan di stesen berkenaan untuk jangka masa tersebut adalah 1,974.34 mm. Rekod juga menunjukkan 46.15 peratus (12 tahun) jumlah hujan yang sentiasa melebihi 2,000 mm setiap tahun kecuali tahun 1999 (1,795.30 mm), 2002 (1,815.50 mm), 2004 (1,706.10 mm), 2005 (1,450.90 mm), 2006 (1,982.80 mm), 2011 (1,632.40 mm), 2013 (1,623.50 mm), 2014 (701.00 mm), 2016 (1,731.60 mm) dan 2019 (1,875.70 mm).

Carta1.1: Taburan hujan di stesen meteorologi KLIA, Sepang, Selangor, 1999-2020



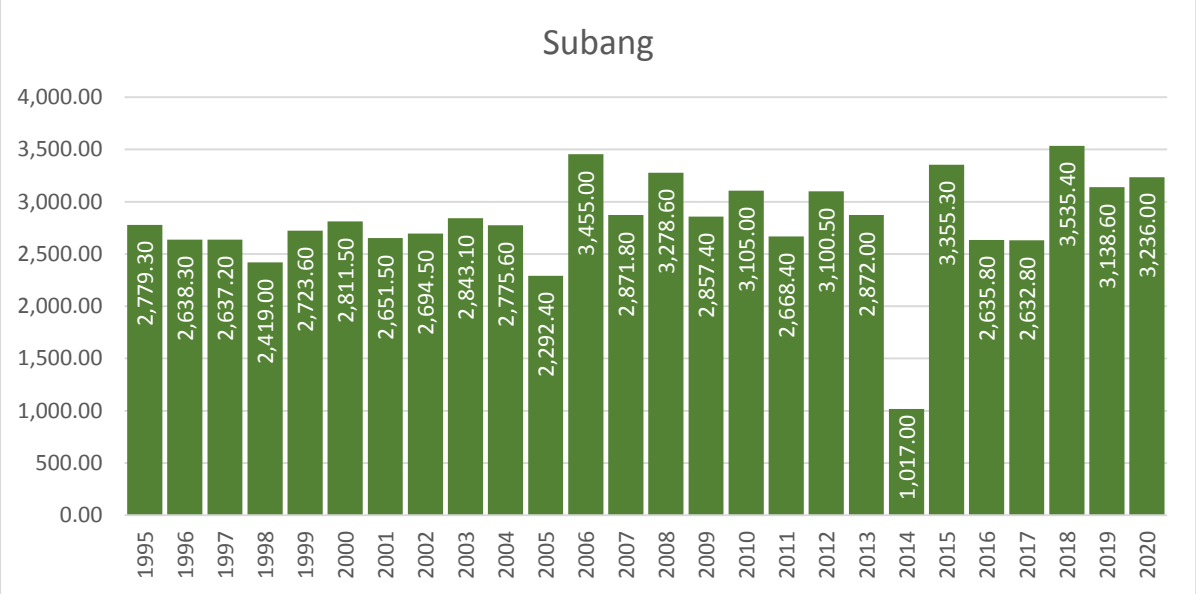
Jumlah hujan tahunan di stesen meteorologi Petaling Jaya dari tahun 1995 hingga 2020 ditunjukkan dalam Carta 1.2. Jumlah hujan tahunan terendah direkodkan pada tahun 2014 iaitu 1,430.40 mm dan tertinggi pada tahun 2006 iaitu 4,077.60 mm. Purata hujan tahunan di stesen berkenaan untuk jangka masa tersebut adalah 3,234.57 mm. Rekod juga menunjukkan 96.15 peratus (25 tahun) jumlah hujan yang sentiasa melebihi 2,000 mm setiap tahun kecuali tahun 2014 (1,430.40 mm).

Carta 1.2: Taburan hujan di stesen meteorologi Petaling Jaya, Selangor, 1995 - 2020



Jumlah hujan tahunan di stesen meteorologi Subang dari tahun 1995 hingga 2020 ditunjukkan dalam Carta 1.3. Jumlah hujan tahunan terendah direkodkan pada tahun 2014 iaitu 1,017.00 mm dan tertinggi pada tahun 2018 iaitu 3,535.40 mm. Purata hujan tahunan di stesen berkenaan untuk jangka masa tersebut adalah 2,808.68 mm. Rekod juga menunjukkan 96.15 peratus (25 tahun) jumlah hujan yang sentiasa melebihi 2,000 mm setiap tahun kecuali tahun 2014 (1,017.00 mm).

Carta1.3: Taburan hujan di stesen meteorologi Subang, Selangor, 1995 – 2020



Kesimpulan

Penelitian terhadap trend hujan dalam tempoh masa tertentu adalah penting dan relevan dalam kajian hidrologi khususnya sebagai alat untuk mengesan dan mengenal pasti perubahan yang berlaku ke atas pelbagai sumber air untuk perancangan dan pengurusan (Xia et al., 2004). Maklumat berkaitan trend hujan yang jelas boleh dijadikan satu indikator peramalan dalam perancangan mengatasi masalah banjir besar atau masalah kekurangan hujan yang dikaitkan dengan kejadian kemarau. Perubahan corak taburan hujan yang berlaku pada skala tempatan dan global serta tahap kepentingan yang tinggi diperlukan untuk menilai trend taburan hujan bagi tujuan tertentu. Ini menunjukkan bahawa sifat dan ciri-ciri iklim di sesuatu kawasan adalah berbeza daripada kawasan lain kerana perbezaan aspek geografi. Selain itu, aspek masa juga mempengaruhi sifat dan ciri-ciri iklim sesuatu kawasan yang turut dikaitkan dengan perubahan global dan tindakan manusia.

Malaysia ialah negara yang dikurniakan taburan jumlah hujan yang banyak, mencapai sehingga 970 bilion meter padu setahun. Peningkatan terhadap permintaan air, khususnya pada musim kering atau kemarau menyebabkan gangguan bekalan air terawat sering berlaku. Isu ini boleh membangkitkan risiko terhadap pembangunan negara, kelestarian air dan kualiti hidup rakyat. Bagi mengatasi masalah tersebut, selain pada masa yang sama mengurangkan kebergantungan kepada bekalan air domestik, Kementerian Alam Sekitar dan Air (KASA) melalui Pelan Pelestarian Alam Sekitar di Malaysia 2020-2030 menetapkan sasaran secara progresif bermula 2021 untuk mencapai 100 juta liter sehari (JLH) penuaian air hujan dan 3,000 JLH takungan air bawah tanah pada 2030. Sasaran ini akan dicapai melalui pembangunan mekanisme simpanan air hujan sebagai air minuman dan kegunaan domestik, selain pembangunan kemudahan simpanan air bawah tanah untuk pertanian dan industri.[2]

[2] Bersama Memakmur Bumi (penerbitan oleh KASA)

Rainfall distribution in Selangor, 1995-2020

Introduction

Recently global climate change has significantly affected the patterns and distribution of rainfall both locally and globally. The Intergovernmental Panel on Climate Change (IPCC) in 2007 reported that there had been an increase in rainfall in parts or areas located at latitude 30º N from 1900 to 2005. Meanwhile, there had been a decrease in rainfall in the tropics since the 1970s.

Climate of Malaysia

Malaysia is located in the equatorial zone and experiences a hot and humid climate. In general, it has a uniform temperature, high humidity and abundant rainfall. Although wind gusts in Malaysia are generally weak and there are periodic changes in wind gust patterns. Based on these changes, four seasons can be distinguished namely Northeast monsoon (November-March), Southwest monsoon (May-September) and two shorter monsoon transition seasons (March-May & October-November)[1].

Rainfall

Seasonal wind patterns together with the nature of the local topography determine the pattern of rainfall distribution in Malaysia. During the northeast season, exposed areas such as the East Coast of Peninsular Malaysia, West Sarawak and the northeast coast of Sabah experience several periods of heavy rainfall. In contrast, inland areas or mountain range protected areas are relatively free from this influence.

Discovery

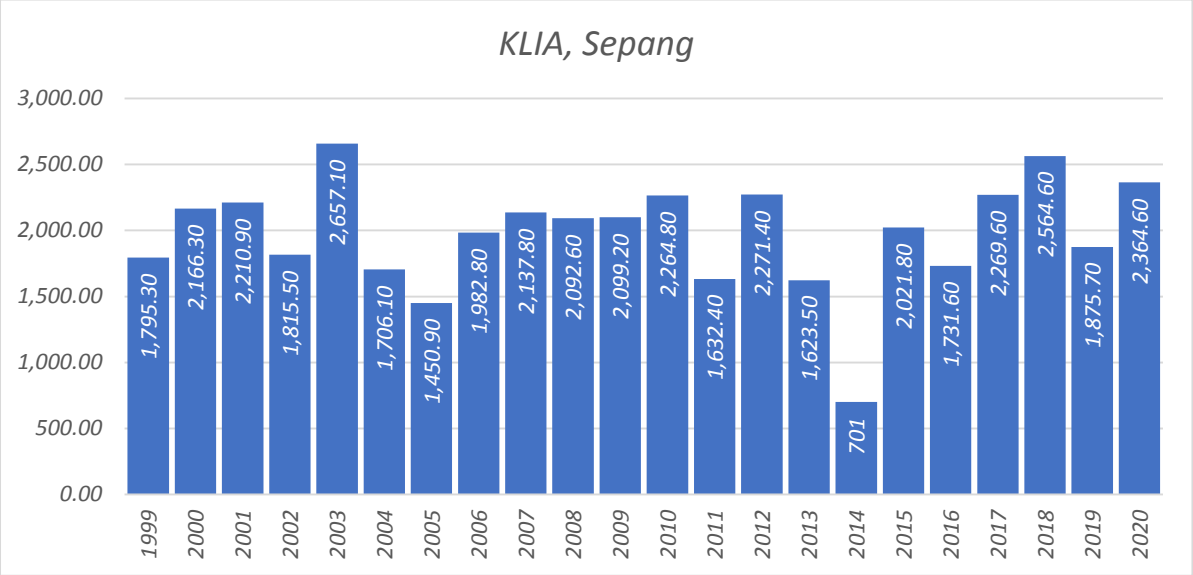
The study and analysis of annual rainfall distribution aim to see the trend of rainfall distribution based on climate change and seasons in the state of Selangor. In addition, the results of the study can be used in formulating management of water use in Selangor to identify water resources and its cycle. Selangor has three meteorological that monitoring the weather conditions continuously and provide meteorological data for weather forecast use.

[1] *Malaysian Meteorological Department Portal, www.met.gov.my*

The stations are KLIA, Sepang; Petaling Jaya and Subang*. Rainfall distribution records of the study area from three stations of the Malaysian Meteorological Department for 26 years (1995 to 2020) were collected and analyzed according to the annual rainfall as shown in Chart 1.1 to 1.3. Based on the study, the change in the annual percentage of rainfall distribution at KLIA, Sepang station showed the highest decline of 31.7 per cent followed by Petaling Jaya station at 27.3 per cent and Subang station at 16.4 per cent.*

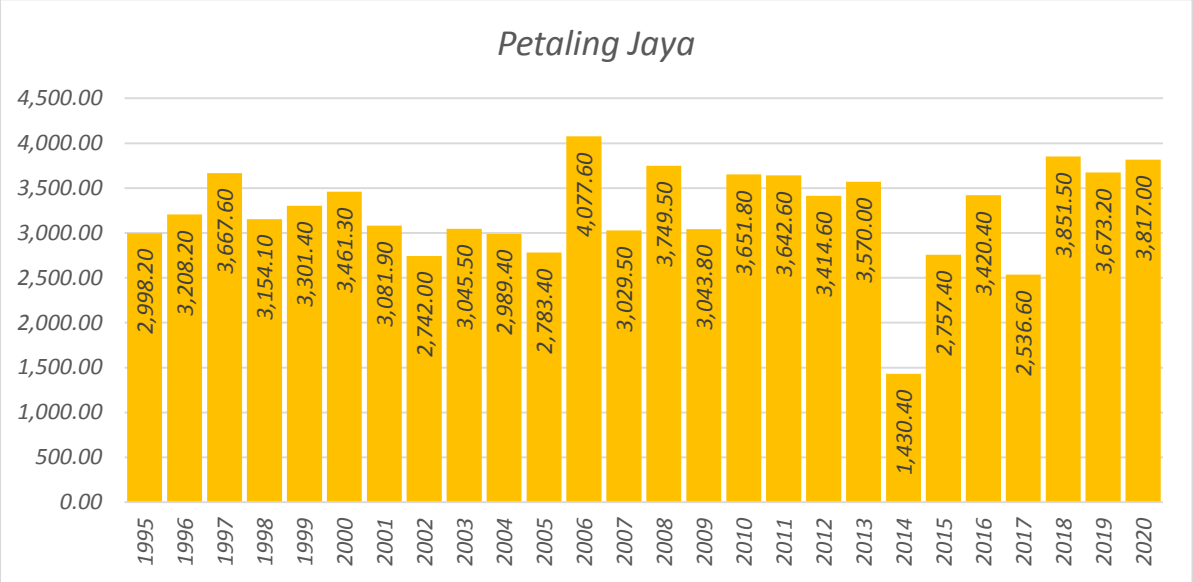
The total annual rainfall at the KLIA, Sepang meteorological station from 1995 to 2020 is shown in Chart 1.1. The lowest annual rainfall was recorded in 2014 at 701.00 mm and the highest was in 2003 at 2,657.10 mm. The average annual rainfall at the station for the period was 1,974.34 mm. Records also showed 46.15 per cent (12 years) of total rainfall which always exceeded 2,000 mm per year except 1999 (1,795.30 mm), 2002 (1,815.50 mm), 2004 (1,706.10 mm), 2005 (1,450.90 mm), 2006 (1,982.80 mm), 2011 (1,632.40 mm), 2013 (1,623.50 mm), 2014 (701.00 mm), 2016 (1,731.60 mm) dan 2019 (1,875.70 mm).

Chart 1.1: Rainfall distribution at KLIA, Sepang meteorological station, Selangor, 1999-2020



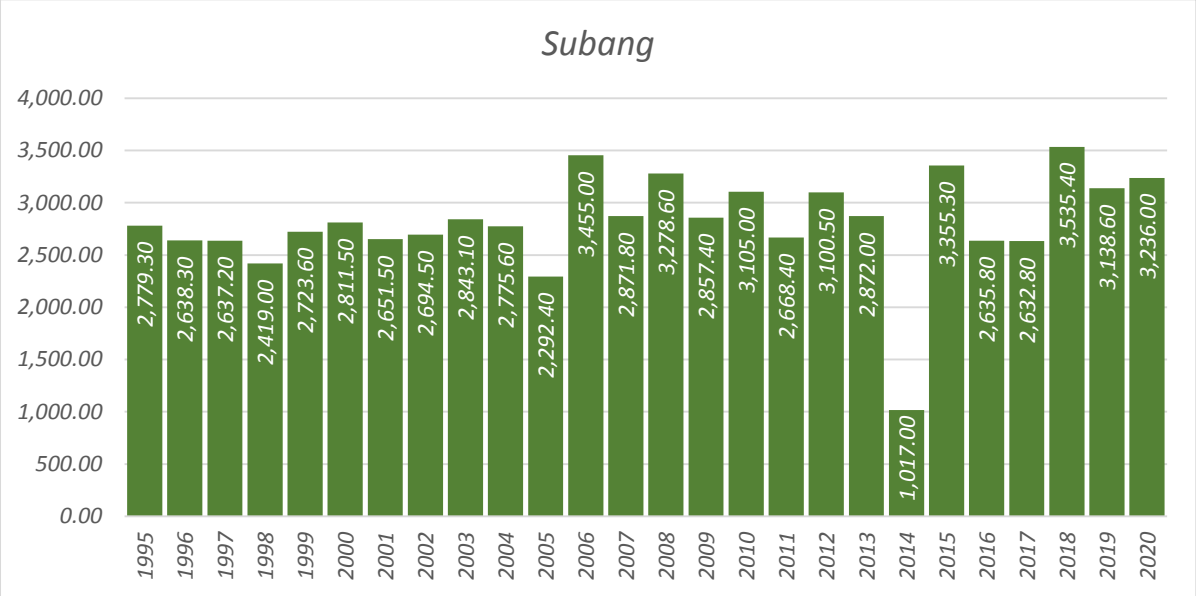
The total annual rainfall at the Petaling Jaya meteorological station from 1995 to 2020 is shown in Chart 1.2. The lowest annual rainfall was recorded in 2014 at 1,430.40 mm and the highest was in 2006 at 4,077.60 mm. The average annual rainfall at the station for the period was 3,234.57 mm. Records also showed 96.15 per cent (25 years) of total rainfall always exceeded 2,000 mm per year except 2014 (1,430.40 mm).

Chart 1.2: Rainfall distribution at Petaling Jaya meteorological station, Selangor, 1995-2020



The total annual rainfall at the Subang meteorological station from 1995 to 2020 is shown in Chart 1.3. The lowest annual rainfall was recorded in 2014 at 1,017.00 mm and the highest was in 2018 at 3,535.40 mm. The average annual rainfall at the station for the period was 2,808.68 mm. Records also showed 96.15 per cent (25 years) of total rainfall always exceeded 2,000 mm per year except 2014 (1,017.00 mm).

Chart 1.3: Rainfall distribution at Subang meteorological station, Selangor, 1995-2020



Conclusion

The study of rainfall trends in a particular period is important and relevant in hydrological studies especially as a tool to detect and identify changes that occur in various water resources for planning and management (Xia et al., 2004). Information related to clear rainfall trends can be used as a forecasting indicator in planning to overcome major floods or the lack of rainfall associated with droughts. Changes in rainfall patterns that occur on a local and global scale as well as a high level of importance are required to assess rainfall distribution trends for specific purposes. This shows that the nature and characteristics of climate in one area is different from in other places due to differences in geographical aspects. In addition, the aspect of time also influences the nature and characteristics of the climate of an area which is also associated with global change and human action.

Malaysia is a country endowed with a large distribution of rainfall, reaching up to 970 billion cubic meters per year. Increases in water demand, especially during the dry season or drought cause disruption of treated water supply to occur frequently. This issue can pose risks to national development, water sustainability and the quality of life of the people. To overcome the problem, besides at the same time reducing dependence on domestic water supply, the Ministry of Environment and Water (KASA) through the Environmental Conservation Plan in Malaysia 2020-2030 set a target progressively starting 2021 to reach 100 million liters per day (MLD) rainwater harvesting and 3,000 MLD of groundwater reservoirs by 2030. This target will be achieved through the development of rainwater storage mechanisms as drinking water and domestic use, as well as the development of groundwater storage facilities for agriculture and industry[2].

Framework for the Development of Environment Statistics **(FDES) dan hubung kait dengan rangka kerja Daya Penggerak-Tekanan-Keadaan-Impak-Respon (DPSIR)**

The FDES and its relationship with the Driving Force-Pressure-State-Impact-Response (DPSIR) framework

Daya Penggerak: Sosio-ekonomi dan sosio-kultur yang memacu aktiviti manusia bagi meningkatkan atau mengurangkan tekanan terhadap alam sekitar
Driving Force: *The socioeconomic and sociocultural forces driving human activities, which increase or mitigate pressures on the environment*

Tekanan: Tekanan aktiviti manusia kepada alam sekitar
Pressure: *The stresses that human activities place in the environment*

Keadaan: Situasi terkini alam sekitar
State: *The current condition of the environment*

Impak: Kesan degradasi alam sekitar
Impact: *The effects of environmental degradation*

Respon: Tindak balas oleh masyarakat terhadap keadaan alam sekitar
Response: *Responses by society to the environmental situation*

Perbandingan nilai IPU dengan tahap pencemaran dan kawalan kesihatan
Comparison of API values with level of pollution and health measures

Indeks Pencemaran Udara (IPU) *Air Pollutant Index (API)*	**Status**	**Tahap pencemaran** *Level of pollution*	**Kawalan kesihatan** *Health measures*
0 – 50	Baik	Pencemaran rendah yang tidak ada kesan buruk terhadap kesihatan	Tidak ada sekatan aktiviti bagi semua lapisan orang. Amalkan gaya hidup yang sihat seperti tidak merokok, kerap bersenam dan mengamalkan pemakanan yang sesuai
	Good	*Low pollution and has no ill-effects on health*	*No restriction of activities for all groups of people. To practice healthy lifestyle e.g. not to smoke, exercise regularly and to observe proper nutrition*
51 – 100	Sederhana	Pencemaran sederhana dan tidak ada kesan buruk terhadap kesihatan	Tidak ada sekatan aktiviti bagi semua lapisan orang. Amalkan gaya hidup yang sihat seperti tidak merokok, kerap bersenam dan mengamalkan pemakanan yang sesuai
	Moderate	*Moderate pollution and has no ill-effects on health*	*No restriction of activities for all groups of people. To practice healthy lifestyle e.g. not to smoke, exercise regularly and to observe proper nutrition*
101 – 200	Tidak Sihat	Tanda-tanda sederhana yang menyebabkan bertambah teruk di kalangan orang berisiko tinggi, iaitu mereka yang menghidap sakit jantung dan paru-paru	Sekatan aktiviti kegiatan luar terhadap bagi orang yang berisiko tinggi. Penduduk amnya perlu mengurangkan aktiviti yang lasak
	Unhealthy	*Mild aggravation of symptoms among high risk persons, i.e. those with heart or lung disease*	*Restriction of outdoor activities for high risk persons. The population should reduce vigorous outdoor activity*
201 – 300	Sangat Tidak Sihat	Tanda-tanda ketara yang menyebabkan bertambah teruk dan toleransi senaman rendah di kalangan orang yang menghidap sakit jantung atau paru-paru	Warga tua dan orang yang menghidap penyakit jantung atau paru-paru dilarang keluar dan kurangkan aktiviti fizikal. Penduduk amnya mesti mengelakkan dari aktiviti luar yang lasak. Sesiapa yang menghadapi masalah kesihatan perlu merujuk kepada doktor
	Very Unhealthy	*Significant aggravation of symptoms and decreased exercise tolerance in person with heart or lung disease*	*Elderly and persons with known heart or lung disease should stay indoors and reduce physical activity. Population should avoid vigorous outdoor activity. Those with any health problems to consult a doctor*
301 – 500	Berbahaya	Tanda-tanda yang menyebabkan bertambah teruk dan membahayakan kesihatan	Warga tua dan orang yang menghidap penyakit jantung atau paru-paru dilarang keluar dan kurangkan aktiviti lasak. Penduduk amnya mesti menghindari aktiviti luar yang lasak
	Hazardous	*Severe aggravation of symptoms and endangers health*	*Elderly and persons with existing heart or lung disease should stay indoors and reduce physical activity. General population should avoid vigorous outdoor activity*
Melebihi 500	Kecemasan	Tanda-tanda yang menyebabkan bertambah teruk dan membahayakan kesihatan	Penduduk amnya dinasihatkan mengikut peraturan oleh Majlis Keselamatan Negara dan sentiasa mengikut pengumuman melalui media massa
Above 500	*Emergency*	*Severe aggravation of symptoms and endangers health*	*General population are advised to follow the orders of the National Security Council and follow the announcements through the mass media*

Klasifikasi Indeks Kualiti Air
Water Quality Index classification

Parameter	Unit	Kelas *Class*				
		I	II	III	IV	V
Ammoniakal Nitrogen (NH_3-N) *Ammoniacal Nitrogen*	mg/l	< 0.1	0.1 - 0.3	0.3 - 0.9	0.9 - 2.7	> 2.7
Keperluan Oksigen Biokimia (BOD_5) *Biochemical Oxygen Demand*	mg/l	< 1	1 - 3	3 - 6	6 - 12	> 12
Keperluan Oksigen Kimia (COD) *Chemical Oxygen Demand*	mg/l	< 10	10 - 25	25 - 50	50 - 100	> 100
Oksigen Terlarut *Dissolved Oxygen*	mg/l	> 7	5 - 7	3 - 5	1 - 3	< 1
pH	-	> 7.0	6.0 - 7.0	5.0 - 6.0	< 5.0	< 5.0
Jumlah Pepejal Terampai (SS) *Total Suspended Solid*	mg/l	< 25	25 - 50	50 - 150	150 - 300	> 300
Indeks Kualiti Air (IKA) *Water Quality Index (WQI)*		> 92.7	76.5 - 92.7	51.9 - 76.5	31.0 - 51.9	< 31.0

Kelas air dan kegunaan
Water classes and uses

Kelas *Class*	**Kegunaan** *Uses*
Kelas I *Class I*	Pemuliharaan alam semula jadi *Conservation of natural environment* Bekalan Air I – Hampir tiada rawatan diperlukan *Water Supply I – Practically no treatment necessary* Perikanan I – Spesis akuatik yang sangat sensitif *Fishery I – Very sensitive aquatic species*
Kelas IIA *Class IIA*	Bekalan Air II – Memerlukan rawatan secara konvensional sahaja *Water Supply II – Conventional treatment required* Perikanan II – Spesis akuatik yang sensitif *Fishery II – Sensitive aquatic species*
Kelas IIB Class IIB	Kegunaan rekreasi yang melibatkan persentuhan badan dengan air *Recreational use with body contact*
Kelas III *Class III*	Bekalan Air III – Memerlukan rawatan yang ekstensif *Water Supply III – Extensive treatment required* Perikanan III – Spesis tertentu yang mempunyai nilai ekonomi biasa Bekalan air minum haiwan ternakan *Fishery III – Tolerant species with common economic value* *Livestock drinking*
Kelas IV *Class IV*	Pengairan *Irrigation*
Kelas V *Class V*	Tiada seperti di atas. *None of the above*

GLOSARI

GLOSSARY

Muka surat ini sengaja dibiarkan kosong

This page is deliberately left blank

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
A			
Air payau	Air yang mengandungi garam yang mana kepekatan garamnya kurang daripada kepekatan garam dalam air laut. Kepekatan jumlah garam yang terlarut biasanya dalam lingkungan 1,000-10,000 miligram per liter (mg/l).	***Brackish water***	*Water containing salts at a concentration significantly lower than that of sea water. The concentration of total dissolved salts is usually in the range of 1,000-10,000 milligrams per litre (mg/l).*
Air tawar	Air bersih semula jadi yang mengandungi kurang kepekatan garam. Pada amnya ia sesuai untuk pengeluaran dan dirawat supaya menjadi air bersih yang sesuai untuk minum.	***Freshwater***	*Naturally occurring water having a low concentration of salts. It is generally accepted as suitable for abstraction and treatment to produce potable water.*
Aktiviti perlindungan alam sekitar	Tujuan utama adalah pencegahan, pengurangan dan penghapusan pencemaran dan lain-lain bentuk degradasi alam sekitar.	***Environmental protection activities***	*Primary purpose is the prevention, reduction and elimination of pollution and other forms of degradation of the environment.*
Ammoniakal Nitrogen (NH_3-N)	Komponen nitrogen yang digunakan sebagai penunjuk untuk menentukan pencemaran oleh kumbahan. Ia terhasil daripada aktiviti mikrobiologi dan biasanya wujud di dalam air permukaan dan air bawah tanah. Sumber utama bagi bahan pencemar NH_3-N adalah kumbahan domestik dan ladang ternakan.	***Ammoniacal Nitrogen***	*A component of nitrogen which is adopted as an indicator to determine pollution by sewage. It is formed from microbiology activity and usually exists inside surface water and groundwater. The main sources of NH_3-N were domestic sewage and livestock farming.*
Akuakultur	Akuakultur ialah proses pengeluaran yang melibatkan pengkulturan (termasuk tuaian) organisma akuatik (ikan, moluska, krustasia, tumbuhan) dengan menggunakan teknik yang direka bentuk untuk meningkatkan pengeluaran organisma tersebut melebihi kapasiti persekitaran semula jadinya.	***Aquaculture***	*Aquaculture refer to the production process involving the culturing or farming (including harvesting) of aquatic organisms (fish, molluscs, crustaceans, plant) using techniques designed to increase the production of the organism beyond the natural capacity of the environment.*
Atmosfera	Jisim udara yang mengelilingi bumi yang sebahagian besarnya terdiri daripada oksigen dan nitrogen.	***Atmosphere***	*Mass of air surrounding the earth, composed largely of oxygen and nitrogen.*
B			
Bahan pencemar udara	Bahan yang terkandung di dalam udara pada kepekatan yang cukup tinggi, boleh memudaratkan kesihatan manusia, haiwan, tanaman dan harta benda. Pencemar udara adalah termasuk bahan yang hampir kepada bentuk asal atau kandungan tiruan yang wujud terapung di udara. Ia boleh terdiri daripada pepejal, titisan cecair atau gas atau gabungan kesemuanya.	***Air pollutants***	*Substances in air that could, at high enough concentrations, harm human beings, animals, vegetation or material. Air pollutants may thus include forms of matter of almost any natural or artificial composition capable of being airborne. They may consist of solid particles, liquid droplets or gases or combination of these forms.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Bahan pencemar	Bahan yang terdapat dalam kepekatan yang boleh membahayakan organisma (manusia, tumbuhan dan haiwan) atau melebihi standard kualiti alam sekitar. Istilah ini sering digunakan seiring dengan pencemar.	***Pollutant***	*Substance that is present in concentration that may harm organisms (humans, plants and animals) or exceed an environmental quality standard. The term is frequently used synonymously with contaminant.*
Banjir	Kuantiti air yang melimpah keluar dari tebing sungai, tasik atau sistem perparitan sedia ada yang disebabkan oleh curahan hujan yang lebat, air laut pasang dan halangan pada sistem saliran.	***Flood***	*A body of water, rising, swelling and overflowing land not usually thus covered. It is also, overflowing of the bank of a stream, lake or drainage system of water onto adjacent land due to storm tidal action and channel obstruction.*
Bencana	Bencana merupakan peristiwa luar jangka dan berlaku secara tiba-tiba yang boleh menyebabkan kerosakan, kemusnahan dan penderitaan manusia. Bencana sering digambarkan sebagai kesan daripada pendedahan kepada peristiwa melampau dan boleh dikelaskan sebagai semula jadi dan teknologi bergantung kepada punca.	***Disasters***	*Disasters are unforeseen and often sudden events that cause great damage, destruction and human suffering. A disaster is often described as a result of exposure to the extreme event and can be both natural and technological depending on their cause.*
Bencana teknologi	Mungkin disebabkan oleh niat, kecuaian atau kesilapan manusia, atau daripada aplikasi teknologi yang rosak atau gagal. Tiga jenis bencana teknologi: kemalangan industri, kemalangan pengangkutan dan pelbagai kemalangan.	***Technological disasters***	*May arise as a result of human intent, negligence or error, or from faulty or failed technological applications. Three types of technological disasters: industrial accidents, transport accidents and miscellaneous accidents.*
Buangan terjadual	Merupakan buangan toksik dan berbahaya yang dihasilkan oleh industri, pertanian, bengkel, kontraktor buangan terjadual, aktiviti domestik dan buangan klinikal dari hospital. Kategori sisa adalah yang tersenarai dalam Jadual Pertama Peraturan Kualiti Alam Sekeliling (Buangan Terjadual) 2005.	***Scheduled waste***	*Defined as toxic waste and hazardous generated by industries, agriculture, workshop, scheduled waste contractors, domestic activities and clinical wastes from hospitals. The waste category listed in the First Schedule Environmental Quality Regulation (Scheduled Waste) 2005.*
D			
Rangka Kerja *Driving Force-Pressure-State-Impact-Response* (DPSIR)	Rangka analitikal yang berdasarkan hubungan di antara komponen D-P-S-I-R.	***Driving Force-Pressure-State-Impact-Response (DPSIR) framework***	*An analytical framework that is based on the casual relationship between its D-P-S-I-R components.*
Demam denggi	Penyakit jangkitan virus yang merebak melalui gigitan nyamuk Aedes aegypti yang telah dijangkiti.	***Dengue fever***	*A type of viral infection that spreads through infected Aedes aegypti mosquito bites.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Disentri	Disentri adalah cirit-birit akut yang mengandungi darah di dalam najis. Disentri kebanyakannya disebabkan oleh spesies Shigella (*disentri bacillary*) atau *Entamoeba histolytica* (*disentri amoebic).*	***Dysentery***	*Dysentery is acute diarrhoea with visible blood in the stool. Dysentery is most often caused by Shigella species (bacillary dysentery) or Entamoeba histolytica (amoebic dysentery).*
F			
Fauna	Semua kehidupan haiwan.	***Fauna***	*All animal life.*
Flora	Semua kehidupan tumbuhan.	***Flora***	*All plant life.*
H			
Habuk Halus (PM)	Partikel pepejal atau titisan cecair dalam udara atau pelepasan yang saiznya 0.01-100µm, contohnya habuk, asap, wasap, semburan dan kabut.	***Particulate Matter (PM)***	*Solid particles or liquid droplets in the air or emission 0.01-100µm size, eg: dust, smoke, fume, spray and mist.*
Habuk Halus (PM_{10})	Partikel terampai berukuran kurang daripada diameter 10 mikron. Pm_{10} boleh berbentuk pepejal atau cecair dan ia termasuk aerosol, debu, asap dan debunga. Partikel ini berpunca daripada stesen janakuasa, proses industri dan aktiviti pembakaran terbuka.	***Particulate Matter (PM_{10})***	*Respirable particles of less than 10 micron in diameter. PM_{10} can be in solid or liquid form and it includes aerosol, dust, smoke and pollen. These particles originate from power plants, industrial processes and open burning activities.*
Halaju angin	Suatu kuantiti vektor di mana ia mempunyai magnitud dan arah. Magnitud halaju angin dipanggil laju angin manakala arah angin merujuk dari mana angin bertiup.	***Wind velocity***	*A quantity of vectors in which it has magnitude and direction. The magnitude of the wind velocity is called the wind speed while the wind direction refers to where the wind blows.*
Hakisan	Proses penghausan permukaan fizikal. Biasanya dikaitkan dengan kehilangan tanah disebabkan air, salji atau angin. Hakisan berlaku secara semula jadi dan menyebabkan bertambah buruk akibat pembersihan tanah yang berkaitan dengan aktiviti manusia seperti pertanian, perumahan atau perindustrian.	***Erosion***	*Wearing away and transport of the soil by wind or running water, glaciers or waves. Erosion occurs naturally but is often intensified by human land-clearing activities related to farming, residential or industrial development.*
Hutan	Tanah merangkumi lebih daripada 0.5 hektar dengan ketinggian pokok lebih daripada 5 meter dan penutup kanopi lebih daripada 10 peratus, atau pokok yang dapat mencapai ambang in situ. Ia tidak termasuk tanah yang didominasi oleh penggunaan tanah pertanian atau bandar.	***Forest***	*Land spanning more than 0.5 hectares with tree higher than 5 metres and a canopy cover of more than 10 per cent, or trees able to reach these thresholds in situ. It does not include land that is predominantly under agricultural or urban land use.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Hutan bandar	Menanam, memelihara dan mengurus pokok di kawasan awam seperti taman rekreasi, taman permainan dan kawasan lapang termasuk sepanjang lebuh raya.	***Urban forest***	*Planting, protecting and managing trees in public areas such as recreational parks, playgrounds and open spaces includes the route along the highway.*
Hutan Simpanan Kekal (HSK)	Mana-mana tanah (tanah berhutan dan tidak berhutan) yang diwartakan atau disifatkan sebagai HSK untuk tujuan perhutanan di bawah Seksyen 7, 8 dan 9 Akta Perhutanan Negara.	***Permanent Reserved Forest (PRF)***	*Any land (forested and non-forested land) that has been enacted or deemed PRF for forestry purposes under Sections 7, 8 and 9, the National Forestry Act.*
I			
Indeks Kualiti Air	Purata pemberat bagi kepekatan ambien bahan pencemar terpilih biasanya berkait kepada pengelasan kualiti air.	***Water Quality Index***	*Weighted average of selected ambient concentrations of pollutants usually linked to water quality classes.*
Indeks Pencemaran Udara (IPU)	Satu indikator yang dicipta berdasarkan kepada penilaian saintifik bagi memaklumkan dengan cara yang mudah difahami kehadiran pencemaran udara dan impaknya terhadap kesihatan manusia. Nilai IPU dikira berdasarkan kepekatan purata setiap pencemar udara iaitu SO_2, NO_2, CO, O_3 dan PM_{10}. Pencemar udara yang dominan dengan kepekatan tertinggi diambil kira sebagai pencemar yang akan menentukan nilai IPU. Pada lazimnya, kepekatan (PM_{10}) adalah yang tertinggi berbanding dengan pencemar yang lain dan ini menentukan bacaan IPU.	***Air Pollutant Index (API)***	*An indicator which is created based on scientific assessment to provide user friendly information about the presence of air pollution and its impact on human health. API value is calculated based on the average concentration of each air pollutant SO_2, NO_2, CO, O_3 and PM_{10}. Dominant of air pollutant with the highest concentrations of pollutants are accounted for as that will determine the value of the API. In general, concentrations of PM_{10} are the highest compared to other concentrations and this determines the API readings.*
Indeks UV Suria (UVI)	Menerangkan tentang sinaran UV di permukaan Bumi. Nilai indeks tersebut mempunyai julat dari sifar ke atas – semakin tinggi nilai indeks, semakin besar potensi berlaku kerosakan pada kulit dan mata dan semakin cepat kesan tersebut boleh berlaku.	***Solar UV Index (UVI)***	*Describes the UV rays on the Earth's surface. The value of the index has a range from zero upwards - the higher the value of the index, the greater the potential for damage to the skin and eyes and the faster the effect can occur.*
Insinerator	Relau untuk membakar bahan buangan di bawah keadaan terkawal.	***Incinerator***	*Furnace for burning wastes under controlled conditions.*
K			
Kadar mortaliti bayi	Nisbah bilangan kematian bayi di bawah umur 1 tahun dalam sesuatu tahun kepada jumlah bilangan kelahiran hidup dalam tahun itu (bagi setiap seribu kelahiran hidup).	***Infant mortality rate***	*The ratio number of deaths of infants under 1 year of age in a given year to the total number of live births in that year (per thousand live births).*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Kawasan tadahan	Kawasan di mana hujan mengalir ke dalam sungai, tasik, atau takungan.	***Catchment area***	*The area from which rainfall flows into a river, lake, or reservoir.*
Kapasiti pengeluaran	Keupayaan pengeluaran air bagi loji yang beroperasi sepenuhnya dalam tahun berkenaan. Kapasiti pengeluaran berbeza setiap tahun tertakluk kepada reka bentuk loji.	***Production capacity***	*The ability to produce water by fully operated plants in the respective year. The production capacity varies every year according to the design of the plants.*
Karbon Monoksida	Tidak berwarna, tidak berbau dan gas beracun yang dihasilkan oleh pembakaran bahan api dan fosil yang tidak lengkap.	***Carbon Monoxide***	*Colourless, odourless and poisonous gas produced by incomplete fossil fuel combustion.*
Kawasan bandar	Kawasan yang diwartakan serta kawasan tepubina yang bersempadan dengannya dan gabungan kedua-dua kawasan ini mempunyai penduduk seramai 10,000 atau lebih. Kawasan tepubina didefinisikan sebagai kawasan yang terletak bersebelahan kawasan yang diwartakan dan mempunyai sekurang-kurangnya 60 peratus (berumur 15 tahun dan lebih) yang terlibat dalam aktiviti bukan Pertanian.	***Urban area***	*Gazetted areas with their adjoining built-up areas which had a combined population of 10,000 or more. Built-up areas were defined as more. Built-up areas were defined as areas contiguous to a gazetted area and had at least 60 per cent of their population (aged 15 years and over) engaged in non-agricultural activities.*
Kawasan perlindungan/ simpanan	Kawasan tanah dan/atau laut khususnya bagi perlindungan dan pemuliharaan kepelbagaian biologi, yang berkaitan dengan sumber semula jadi dan diurus melalui perundangan ataupun cara lain yang berkesan. Definisi ini diadaptasi daripada *The International Union for Conservation of Nature* (IUCN).	***Protected/preserved area***	*An area of land and/or sea especially dedicated to the protection and maintenance of biological diversity and of natural and associated cultural resources and managed through legal or other effective means. This definition is adopted by The International Union for Conservation of Nature (IUCN).*
Kemalangan jalan raya	Kemalangan atau kejadian yang mana kerosakan berlaku ke atas mana-mana orang, harta, kenderaan, struktur atau haiwan dan berlaku di mana-mana jalan awam termasuklah jambatan, terowong, hentian sebelah, jalan bertingkat, jejambat, plaza tol dan sebagainya.	***Road traffic crash***	*Accidents or occurrences whereby damage or injury is caused to any person, property, vehicle, structure or animal and occurs in any public road including bridge, tunnels, lay-bye, interchanges, overpasses, toll plazas and so on.*
Kelajuan angin permukaan	Merujuk kepada laju angin pada ketinggian piawai 10m di atas tanah.	***Surface wind speed***	*Refers to the wind speed at a standard altitude of 10m above ground.*
Kepadatan penduduk	Jumlah bilangan penduduk setiap unit per segi di kawasan muka bumi.	***Population density***	*Total number of inhabitants per square unit of surface area.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Kepelbagaian biologi	Kepelbagaian biologi bermaksud variasi di antara organisma hidup daripada pelbagai sumber termasuk daratan, marin serta ekosistem akuatik lain; ia termasuklah kepelbagaian di dalam peringkat genetik, spesies dan ekosistem. Definisi ini diadaptasi daripada *United Nations Convention on Biological Diversity*.	***Biological diversity***	*Biological diversity means the variability among living organisms from various sources including terrestrial, marine and other aquatic ecosystems; this includes diversity at the genetic, species and ecosystem level. This definition is adopted by the United Nations Convention on Biological Diversity.*
Keperluan Oksigen Biokimia (BOD_5)	Ukuran jumlah oksigen terlarut yang diperlukan oleh organisma untuk mengurai bahan organik yang terdapat di dalam air. Biasanya bacaan diambil dalam tempoh 5 hari.	***Biochemical Oxygen Demand (BOD_5)***	*Dissolved oxygen required by organisms for the aerobic decomposition of organic matter present in water. This measurement is usually taken within 5 days.*
Keperluan Oksigen Kimia (COD)	Indeks pencemaran air yang digunakan sebagai ukuran kepekatan jisim oksigen yang diperlukan untuk mengurai bahan organik dan bukan organik.	***Chemical Oxygen Demand (COD)***	*Index of water pollution measuring the mass concentration of oxygen consumed by the chemical breakdown of organic and inorganic matter.*
Kolera	Penyakit usus pada umumnya disebabkan oleh pencemaran najis daripada air dan makanan.	***Cholera***	*Intestinal disease generally caused by faecal contamination of water and food.*
Kuasa hidro	Tenaga primer yang disimpulkan tersedia untuk pengeluaran elektrik dan ditunjukkan dari segi konvensional setara dengan bahan api fosil menggunakan kecekapan purata penukaran haba untuk tahun tersebut.	***Hydropower***	*Is the inferred primary energy available for electricity production and is shown in terms of conventional fossil fuel equivalent using the average thermal efficiency of conversion for the year.*
Kutipan biji benih	Biji benih pokok hutan yang dikutip secara terus dari atas pokok.	***Seeds collections***	*Seeds of forest trees collected directly from the tree.*
L			
Ladang hutan	Kawasan yang ditanam dengan pokok atau tumbuh-tumbuhan hutan, sama ada daripada spesies tempatan atau dagang, dengan kaedah tanaman secara terbuka yang luasnya tidak kurang daripada 50 ha. Ladang hutan boleh merangkumi kawasan yang terletak di dalam atau di luar HSK.	***Forest plantation***	*Area planted with trees or forest plants, whether from local or foreign species, the method of cultivation as wide open no less than 50 ha. Forest plantations can include areas that are located within or outside the PRF.*
Latar belakang	Stesen yang tidak terpengaruh dengan faktor-faktor pencemaran udara dari industri dan kenderaan bermotor. Stesen ini biasanya ditempatkan di kawasan yang jauh dari punca pencemar dan dijadikan bacaan rujukan bagi kategori stesen yang lain.	***Background***	*Stations that is not affected by air pollution factors from industry and motor vehicles. The station is usually located in a remote area of interest and is a reference point for other categories of stations.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Logam berat	Logam bertoksik yang digunakan dalam proses industri, sebagai contoh, arsenik, kadmium, kromium, tembaga, plumbum, raksa, nikel dan zink. Ia boleh merosakkan kehidupan tumbuhan dan haiwan pada kepekatan yang rendah dan cenderung untuk berkumpul dalam rantaian makanan.	***Heavy metals***	*Potentially toxic metals used in industrial processes, for example, arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc. They may damage plant and animal life at low concentrations and tend to accumulate in the food chain.*
M			
Megakepelbagaian	Konsep megakepelbagaian melibatkan anggaran jumlah bilangan semua organisma hidup di dalam ekosistem dan ini bermakna sesuatu kawasan itu mempunyai sekurang-kurangnya 60.0 peratus daripada spesis yang diketahui di dunia. Sebahagian besar daripada kepelbagaian tersebut adalah endemisme dan ini menggambarkan keunikan kawasan tersebut.	***Megadiversity***	*The concept of megadiversity involves an estimate of the total number of all the organisms in an ecosystem and is represented by an area that comprises at least 60.0 per cent of the world's known species. A major part of diversity is endemism as this reflects the uniqueness of an area.*
N			
Nilai defektif	Nilai yang diragui atau nilai yang tidak diterima setelah menjalani proses semakan kualiti data.	***Defective value***	*A doubtful value or an unacceptable value after undergoing a data quality review process.*
Nilai pH	Ukuran kepada keasidan untuk nilai alkali dalam cecair. Nilai pH di antara lingkungan 0 ke 7 menunjukkan asid, nilai pH di antara lingkungan 7 ke 14 menunjukkan alkali, dan nilai pH 7 menandakan neutral.	***pH Value***	*Measure of the acidity or alkalinity of a liquid. A pH value in the range of 0 to 7 indicates acidity, a pH value in the range of 7 to 14 indicates alkalinity, and a pH value of 7 signifies neutrality.*
Nitrogen Dioksida (NO_2)	Nitrogen Dioksida terbentuk di persekitaran udara melalui pengoksidaan Nitrogen Monoksida (NO). Gas bertoksik berwarna merah keperangan ini mempunyai bau yang kuat dan tajam.	***Nitrogen Dioxide (NO_2)***	*Nitrogen Dioxide is formed in the ambient air through the oxidation of Nitrogen Monoxide (NO). This reddish brown toxic gas has a sharp and pungent odour.*
O			
Oksigen Terlarut (DO)	Jumlah gas oksigen (O_2) yang berada dalam air, dikira mengikut kandungannya dalam isi padu air (miligram O_2 seliter) atau jumlah peratusnya dalam air tepu.	***Dissolved Oxygen (DO)***	*Amount of gaseous oxygen (O_2) actually present in water expressed in terms either of its presence in the volume of water (milligrams of O_2 per litre) or of its share in saturated water (percentage).*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Ozon (O_3)	Gas yang mengeluarkan bau yang tidak menyenangkan, tidak berwarna dan bertoksik yang menyumbang kepada fotokimia asbut (campuran asap dan kabut). O_3 terbentuk hasil daripada reaksi kimia antara Sebatian Organik Meruap (VOC) dan Nitrogen Oksida (NO_x). Pada lewat tengah hari atau awal petang, lazimnya kepekatan ozon adalah tinggi dan mendominasi bacaan IPU di sesetengah kawasan. Di bawah pengaruh cahaya matahari, NO_x dan VOC yang dilepaskan dari ekzos kenderaan bermotor dan industri ia bertindak balas bagi membentuk ozon di permukaan bumi.	***Ground Level Ozone (O_3)***	*A pungent, colourless and toxic gas that contributes to photochemical smog. O_3 is formed as a result of chemical reaction in the air between Volatile Organic Compounds (VOCs) and Nitrogen Oxide (NO_x). By the late afternoon or early evening, usually O_3 concentration is high and dominating API readings in some areas. Under the sunlight influence, and reaction between NO_x and VOC that released from motor vehicles exhaust and industrial which form the O_3 in the earth's surface. Under the influence of sunlight, nitrogen oxide (NO_x) and volatile organic compounds (VOCs) emitted from motor vehicle exhaust and industry reacts to form O_3 in the earth's surface.*
P			
Pelepasan	Pembuangan bahan pencemar ke atmosfera dari punca tetap seperti cerobong asap dan lain-lain, kawasan komersial atau perindustrian dan juga berpunca daripada punca bergerak seperti kenderaan bermotor, lokomotif dan pesawat.	***Emission***	*Discharge of pollutants into the atmosphere from stationary sources such as smokestacks, other vents, surface areas of commercial or industrial facilities and mobile sources, for example, motor vehicles, locomotives and aircraft.*
Pemantauan kualiti udara	Bacaan *standard* dan pemerhatian terhadap udara yang diambil secara berterusan atau kerap yang digunakan sebagai peringatan dan kawalan.	***Air quality monitoring***	*Continuous or frequent standardised measurement and observation of the air, often used for warning and control.*
Pencemaran marin	Pengenalan langsung atau tidak langsung oleh manusia atau tenaga ke dalam alam sekitar marin (termasuk muara), menghasilkan kemusnahan kepada sumber kehidupan, berbahaya kepada kesihatan hidupan, halangan kepada kegiatan marin termasuk memancing, merosakkan kualiti air laut dan mengurangkan keselesaan.	***Marine pollution***	*Direct or indirect introduction by humans of substances or energy into the marine environment (including estuaries), resulting in harm to living resources, hazards to human health, hindrances to marine activities including fishing, impairment of the quality of sea water and reduction of amenities.*
Pencemaran udara	Kandungan sesuatu gas, cecair atau zarah yang terampai di udara ambien yang boleh menjejaskan kehidupan atau memberi kesan negatif kepada manusia, tumbuh-tumbuhan dan haiwan.	***Air pollution***	*Content of a gas, liquid or particles suspended in the ambient air that could affect life or a negative impact on humans, plants and animals.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Penempatan penduduk	Konsep penyatuan yang terdiri daripada (a) komponen fizikal tempat berteduh dan infrastruktur dan (b) perkhidmatan yang mana menyokong penyediaan elemen fizikal. Ini boleh dikatakan seperti perkhidmatan komuniti seperti pendidikan, kesihatan, kebudayaan, kebajikan, rekreasi dan pemakanan.	***Human settlements***	*Integrative concept that comprises (a) physical components of shelter and infrastructure and (b) services to which the physical elements provide support, that is to say, community services such as education, health, culture, welfare, recreation and nutrition.*
Pengawasan kualiti air	Bacaan *standard* dan pemerhatian terhadap air yang diambil secara berterusan atau kerap yang digunakan sebagai peringatan dan kawalan.	***Water quality monitoring***	*Continuous or frequent standardised measurement and observation of the water often used for warning and control.*
Penyejatan	Suatu proses yang melibatkan perubahan fasa cecair kepada gas apabila cecair terdedah kepada atmosfera. Dalam meteorologi ia diukur sebagai jumlah sejatan iaitu jumlah air yang disejat daripada tangki sejatan.	***Evaporation***	*A process that involves the phase change of a liquid to a gas when the liquid is exposed to the atmosphere. In meteorology, it is measured as the amount of evaporation i.e. the amount of water evaporated from the evaporation tank.*
Penyiasatan migrasi	Mengumpul maklumat responden di tempat kediaman pada dua titik masa (tarikh tertentu), di mana tempoh antaranya genap satu tahun. Pertukaran lokaliti tempat kediaman pada dua titik masa ini dianggap sebagai migrasi. Penduduk yang bertukar lokaliti tempat kediaman serta selalu merentasi sempadan negeri adalah migran antara negeri.	***Migration survey***	*Collects information on respondents' usual place of residence at two specific points of time which are exactly one year apart. Changes in the usual place of residence locality at these two points in time constitute migration. Population that changes its usual place of residence across state boundaries is known as inter-state migrant.*
Pepejal Terampai (SS)	Pepejal Terampai (SS) berpunca daripada hakisan tanah dan mendapan daripada pembangunan kawasan tanah tinggi dan pembukaan tanah untuk pembalakan dan perlombongan. Ia akan mengakibatkan peningkatan SS dan perubahan kepada kualiti air di dalam lembangan sungai.	***Suspended Solids***	*Suspended Solids (SS) is caused by soil erosion and sedimentation from the development in highlands and clearance of land for logging and mining. It is resulted in the increase of SS and affects water quality in the river basins.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Perangkaan alam sekitar	Statistik yang menerangkan keadaan dan arah aliran alam sekitar, meliputi media alam sekitar semula jadi (udara/iklim, air, tanah), biota dalam media dan penempatan penduduk. Perangkaan alam sekitar mengukur aktiviti manusia dan kejadian semula jadi yang membawa kesan kepada alam sekitar, kesan daripada aktiviti-aktiviti dan kejadian ini, reaksi masyarakat kepada kesan alam sekitar dan kualiti kesediaan aset semula jadi. Definisi lengkap termasuk petunjuk alam sekitar, indeks dan perakaunan.	***Environment statistics***	*Statistics that describe the state and trends of the environment, covering the media of the natural environment (air/climate, water, land/soil), the biota within the media, and human settlements. Environment statistics are integrative in nature, measuring human activities and natural events that affect the environment, the impacts of these activities and events, social responses to the environmental impacts, and the quality and availability of natural assets. Broad definitions include environmental indicators, indices and accounting.*
Perubahan iklim	Istilah yang kerap digunakan merujuk kepada kepanasan sejagat berkaitan pelepasan gas rumah kaca hasil kegiatan manusia.	***Climate change***	*Term frequently used in reference to global warming due to greenhouse gas emissions from human activities.*
R			
Rangka Kerja Pembangunan Perangkaan Alam Sekitar	Konsep rangka kerja bagi membantu membangunkan, menyelaras dan menguruskan perangkaan alam sekitar dan perangkaan berkaitan dengan sosial ekonomi dan demografi. Ia dibangunkan oleh *United Nations Statistics Division* dalam tahun 1984, dan ianya berdasarkan kepada prinsip tekanan-tindak balas impak alam sekitar.	***Framework for the Development of Environment Statistics (FDES)***	*Conceptual framework that assists in development, coordination and organisation of environment statistics and related socio-economic and demographic statistics. It was developed by the United Nations Statistics Division in 1984, and is based on stress-response principles of environmental impacts.*
S			
Sinaran global	Jumlah sinaran radiasi elektomagnet yang dipancarkan oleh matahari ke permukaan bumi.	***Global radiation***	*The amount of electromagnetic radiation emitted by the sun to the earth's surface.*
Sisa	Aliran bahan pepejal, cecair dan gas, serta tenaga, yang dibuang, dilepaskan atau dikeluarkan oleh pertubuhan dan isi rumah melalui proses pengeluaran, penggunaan atau pengumpulan.	***Residuals***	*Flows of solid, liquid and gaseous materials, and energy, discarded, discharged or emitted by establishments and households through production, consumption or accumulation processes.*
Sistem bekas lombong	Sistem untuk menternak ikan di mana-mana tanah yang pernah (tetapi tidak lagi) diberi atau dikeluarkan pajakan lombong atau sijil lombong di bawah mana-mana undang-undang bertulis mengenai perlombongan.	***Ex-mining culture system***	*System of fish culture on any land in respect of which a mining lease or certificate were once but no longer granted or issued under any written law relating to mining.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Sistem kandang	Sistem yang merupakan suatu kepungan yang dibuat daripada bahan pengadang yang dilekatkan pada tiang yang ditanam ke dasar laut.	***Pen culture system***	*System of fish culture in an enclosure made of any screening material attached to poles staked to the seabed.*
Sistem kolam	Sistem ternakan ikan di dalam kolam.	***Culture system***	*System of fish culture in ponds.*
Sistem sangkar	Sistem untuk menternak ikan di dalam suatu kepungan yang dibuat daripada apa-apa bahan saringan yang diikat pada struktur yang dilabuhkan pada dasar perairan sungai atau mana-mana tempat di darat.	***Cage culture system***	*System of fish culture in an enclosure on whatever shape or size made of any screening material and attached to floating structures which are anchored to the sea-bed.*
Sistem tangki	Sistem ternakan ikan di dalam tangki di atas tanah.	***Tank culture system***	*System of fish culture in tanks on land.*
Standard kualiti udara	Kepekatan sesuatu bahan cemar yang dibenarkan dalam atmosfera oleh undang-undang untuk meminimumkan kesan mudarat.	***Air quality standards***	*Levels of air pollutants prescribed by regulations that may not be exceeded during a specified time in a defined area.*
Subbandar	Stesen pengawasan kualiti udara yang terletak di kawasan pinggir bandar.	***Suburban***	*Air quality monitoring stations located in the suburban areas.*
Sulfur Dioksida (SO_2)	Berat, tajam, gas tidak berwarna terbentuk terutamanya oleh pembakaran bahan api fosil. Ia adalah berbahaya kepada manusia dan tumbuh-tumbuhan dan menyumbang kepada keasidan dalam hujan.	***Sulphur Dioxide (SO_2)***	*Heavy, pungent, colourless gas formed primarily by the combustion of fossil fuels. It is harmful to human beings and vegetation and contributes to the acidity in precipitation.*
T			
Taman Laut	Kawasan perairan laut yang dizonkan sejauh dua batu nautika dari tikas air surut terendah, kecuali Pulau Kapas di Terengganu, Pulau Kuraman, Pulau Rusukan Besar dan Pulau Rusukan Kecil di W.P. Labuan yang dizonkan sejauh satu batu nautika dari tikas air surut terendah. Taman Laut ditubuhkan untuk melindungi dan memulihara pelbagai habitat dan hidupan marin akuatik.	***Marine Park***	*Sea zoned area for a distance of two nautical miles from the lowest sea level, except in Kapas Island in Terengganu, Kuraman Island, Rusukan Besar Island and Rusukan Kecil Island in W.P. Labuan. These areas are zoned for a distance of one nautical mile from the lowest sea level. Marine Park is established to protect and conserve various habitats and aquatic marine life.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Tanah Bencah-Ramsar	Kawasan yang berpaya, fen, tanah gambut atau berair samada semula jadi atau buatan manusia, kekal atau sementara, mengandungi air yang tidak mengalir, mengalir, air bersih, air tawar atau masin termasuk kawasan perairan laut, di mana dalamannya tidak melebihi enam meter.	***Wetland-Ramsar***	*Areas of marshes, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static, flowing, fresh, brackish or salt, including areas of marine water, the depth of which at low tide does not exceed six metres.*
Tanah bencah	Kawasan dari lapisan tanah rendah yang mana aras air bumi yang berada atau berhampiran dengan permukaan tanah pada kebanyakan masa. Tanah bencah termasuk semua tanah berpaya, tanah berlumpur, fen dan muara.	***Wetland***	*Area of low-lying land where the water table is at or near the surface most of the time. Wetlands include swamps, bogs, fens, marshes and estuaries.*
Tanah berhutan	Tanah yang merangkumi lebih daripada 0.5 hektar dengan pokok-pokok yang lebih tinggi daripada 5 meter dan litupan kanopi melebihi 10%, atau pokok yang mampu untuk mencapai tahap in-situ (FAO 1998; FRA 2000). Ia tidak termasuk tanah di bawah penggunaan tanah pertanian atau bandar (dirian pokok di kawasan pertanian, taman dan sebagainya). Keluasan kawasan berhutan ini dibahagikan kepada Hutan Simpanan Kekal (HSK), Hutan Tanah Kerajaan (HTK), Hutan Hidupan Liar di luar kawasan HSK, lain-lain Rizab Berhutan dan Tanah Berimilik.	***Forested land***	*A land area of more than 0.5 ha. The trees should be able to reach a minimum height of 5 metres with a tree canopy cover of more than 10 per cent. It does not include land under agricultural or urban land use (stand of trees in agricultural areas, parks, etc.). Forested land is divided into permanent forest reserve (PRF), forest land government (FLG), forest wildlife outside the PRF, others forested reserve and alienated land.*
Tanaman	Tanaman merujuk kepada tumbuhan atau hasil pertanian yang ditanam untuk makanan atau keperluan ekonomi lain seperti pakaian atau makanan ternakan.	***Crops***	*Crops refer to plants or agricultural produce grown for food or other economic purposes, such as clothes or livestock fodder.*
Tanaman buluh	Buluh digunakan secara meluas dalam industri pembuatan perabot, kraftangan, bekas barangan, tikar, pulpa, kertas, bahan bakar, pembinaan dan peralatan rumah.	***Bamboo plantation***	*Bamboo is a widely used in the furniture manufacturing industry, handicrafts, container products, matting, pulp, paper, fuel, and construction as well as home appliances.*
Tanaman mengaya	Merupakan suatu rawatan pemulihan hutan ke atas kawasan hutan miskin dan kawasan lapang yang dilaksanakan ke atas kawasan di dalam HSK yang telah diusahasil bagi membantu meningkatkan isi kandungan hutan tersebut supaya mencapai tahap yang dikehendaki.	***Enrichment planting***	*Forest restoration treatments on poor forest areas and open spaces that are performed on the areas in PRF which has been harvested to help improve the content of the forest to reach the desired level.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
Tanaman rotan	Salah satu hasil hutan bukan kayu utama. Bertujuan untuk meningkatkan stok tumbuhan dalam kawasan HSK yang sesuai bagi memastikan pengeluaran sumber ini secara berkekalan untuk menampung keperluan industri perabot rotan tempatan.	***Rattan plantation***	*One of the main non-timber forest products. The plantation is to increase the stock of this plant in the PRF appropriate to ensure sustainable production of these resources to meet the needs of the local rattan furniture industry.*
Tanaman tumbuhan ubatan	Spesies tumbuhan yang mempunyai nilai perubatan dan ditanam secara ladang.	***Planting of medicinal plants***	*Species of plants that have medicinal value and cultivated fields.*
Tapak pelupusan	Pemindahan terakhir bahan sisa di dalam atau di atas tanah yang dikawal atau tidak dikawal mengikut cara kebersihan yang berbeza, perlindungan alam sekitar dan keperluan keselamatan yang lain.	***Landfill***	*Final replacement of waste in or on the land in a controlled or uncontrolled way according to different sanitary, environmental protection and other safety requirements.*
Tapak pelupusan sanitari	Kaedah untuk melupuskan sisa pepejal di atas tanah tanpa menimbulkan gangguan atau bahaya kepada kesihatan awam dan alam sekitar. Berdasarkan prinsip kejuruteraan, sisa pepejal dihadkan kepada kawasan kecil, dikurangkan kepada jumlah yang lebih kecil dan ditutup dengan lapisan tanah pada penghujung waktu operasi setiap hari, atau pada jangka masa yang lebih kerap mengikut keperluan.	***Sanitary landfill***	*A method of disposing of solid wastes on land without creating nuisances or hazards to public health or the environment. Using the principles of engineering, the solid waste is confined to the smallest practical area, reduced to the smallest practical volume and covered with a layer of earth at the conclusion of each day's operation (daily cover), or at more frequent intervals as may be necessary.*
Tapak semaian	Menghasilkan anak benih dan anak pokok untuk digunakan bagi projek-projek penghutanan semula, penyelidikan, perhutanan bandar dan aktiviti landskap.	***Nursery***	*Produce seedlings and saplings to be used for reforestation projects, research, urban forestry and landscape activities.*
Tekanan aras laut	Tekanan udara yang diukur berdasarkan jarak ketinggian dari paras purata aras laut (mengikut *ICAO Standard Atmosphere.*	***Sea level pressure***	*The air pressure measured based on the altitude distance from the mean sea level according to the ICAO Standard Atmosphere.*
Tidak diperoleh	Tiada pencerapan dilaksanakan.	***Not available***	*No observations are performed*
Topografi	Bentuk fizikal kawasan permukaan, termasuk muka bumi atau ketinggian relatif dan kedudukan bentuk muka bumi buatan manusia dan semula jadi.	***Topography***	*Physical feature of a surface area, including its relief or relative elevations, and the position of human-made and natural features.*

TERMA	PENERANGAN	*TERMS*	*EXPLANATIONS*
V			
Viral Hepatitis A	Penyakit akut biasanya termasuk demam, dedar, keletihan melampau, anoreksia, loya, jaundis akut dan kuadran atas kanan abdomen dengan pertambahan lebihan alanine aminotransferase melebihi 2.5 kali kadar biasa.	***Viral Hepatitis A***	*Acute illness typically including fever, malaise, extreme fatigue, anorexia, nausea, acute jaundice and right upper quadrant of abdomen tenderness with raised alanine aminotransferase more than 2.5 times normal rate.*

PERTANYAAN BERHUBUNG DENGAN PENERBITAN INI BOLEH JUGA DIBUAT DI PEJABAT PERANGKAAN NEGERI SEPERTI BERIKUT:

Pengarah,
Jabatan Perangkaan Malaysia Negeri Johor,
Tingkat 14, Menara Tabung Haji,
Jalan Air Molek,
80000 Johor Bahru, Johor.
Tel. : 07-225 3700
Faks : 07-224 9972
E-mel : jpjohor@dosm.gov.my

Pengarah,
Jabatan Perangkaan Malaysia Negeri Kedah,
Aras 1, Zon C, Wisma Persekutuan,
Pusat Pentadbiran Kerajaan Persekutuan,
Bandar Muadzam Shah,
06550 Anak Bukit, Alor Setar, Kedah.
