NOTA TEKNIKAL

KONSEP DAN DEFINISI

Matriks Perakaunan Sosial

Matriks Perakaunan Sosial (MPS) merupakan satu rangka kerja terperinci yang memperihalkan data komprehensif dalam sesebuah ekonomi. MPS mengintegrasikan statistik ekonomi dan sosial. Di samping itu, MPS juga menerangkan hubungan antara institusi dalam ekonomi, iaitu isi rumah, perbadanan kewangan & bukan kewangan, kerajaan dan negara lain di dunia. Struktur seimbang MPS merupakan maklumat input penting bagi analisis fiskal.

MPS dibangunkan berdasarkan kepada kepentingan dasar dan ketersediaan data yang bertujuan untuk menganalisis hubungan antara pembangunan ekonomi dan sosial di Malaysia. Tema MPS adalah agihan pendapatan.

Konsep

MPS menunjukkan saling kebergantungan antara sektor ekonomi dalam satu rangka kerja. Pendapatan dan perbelanjaan digambarkan mengikut enam komponen utama MPS seperti ditunjukkan pada Rajah 1:

Rajah 1: Komponen utama MPS

MPS diwakili oleh matriks persegi. Rangka kerja MPS Malaysia dibina berdasarkan skematik asas berikut (Rajah 2):

Rajah 2: Skematik Asas Matriks Perakaunan Sosial

		Faktor pengeluaran	Aktiviti pengeluaran	Institusi	Modal disatukan	Pembiayaan	Negara lain di dunia	Jumlah Pendapatan
	i/j	1	2	3	4	5	6	
Faktor pengeluaran	1		Nilai ditambah				Pendapatan faktor	Pendapatan faktor
Aktiviti pengeluaran	2		Bahan mentah	Penggunaan	Modal kasar		Eksport	Permintaan
Institusi	3	Pampasan pekerja	Cukai komoditi	Pindahan dan cukai	Cukai	Pembiayaan	Faedah sosial	Pendapatan institusi
Modal disatukan	4			Tabungan				Tabungan
Pembiayaan	5			Pemberian pembiayaan				Pemberian pembiayaan
Negara lain di dunia	6	Pembayaran faktor	Import	Penggunaan	Imbangan akaun modal		Imbangan pendapatan	Pendapatan negara lain daripada Malaysia
Jumlah Perbelanjaan		Pembayaran faktor	Penawaran	Perbelanjaan institusi	Pelaburan	Pembiayaan	Perbelanjaan negara lain ke Malaysia	

Pendapatan bagi setiap transaksi ditunjukkan sebagai baris (i) dan perbelanjaan diwakili dengan lajur (j). Jumlah bagi setiap baris dan lajur dalam matriks mestilah sama nilainya dan konsisten dengan konsep asas ekonomi iaitu setiap pendapatan terdapat perbelanjaan yang sepadan. MPS yang terperinci diimbang pada peringkat mikro. MPS 2021 di peringkat makro terdiri daripada matriks berdimensi 10 kali 10. Struktur asas bagi MPS 2021 ditunjukkan dalam Jadual A.

Isi rumah

Isi rumah dalam MPS terdiri daripada semua isi rumah residen dan institusi bukan keuntungan yang berkhidmat untuk isi rumah (NPISHs). Oleh kerana isi rumah ditakrifkan sebagai unit institusi, ia termasuk perusahaan tidak diperbadankan yang dimiliki oleh isi rumah dan NPISHs.

Kategori pendapatan

Julat pendapatan bulanan bagi pampasan pekerja diklasifikasikan seperti kategori berikut:

Kategori	Julat pendapatan bulanan, MPS 2021
Tinggi	Lebih tinggi daripada RM11,594
Sederhana	RM4,810 hingga RM11,594
Rendah	Kurang daripada RM4,810

PENERANGAN SUB MATRIKS DAN SUMBER DATA

<u>Sub matriks</u>	<u>Penerangan</u>
[1,2]	Nilai ditambah adalah diperolehi daripada aktiviti pengeluaran domestik. Pengagihan pendapatan dilaksanakan bagi faktor pengeluaran dalam bentuk pampasan pekerja kepada guna tenaga dan lebihan kendalian. Guna tenaga dikelaskan mengikut lokasi geografi, kategori pendapatan dan kategori etnik. Sumber data: • Jadual Input-Output Malaysia, 2021 • Penyiasatan Pendapatan, Perbelanjaan Isi Rumah dan Kemudahan Asas, 2022 • Akaun Ekonomi Negara Malaysia, 2021 • Keluaran Dalam Negeri Kasar Kaedah Pendapatan, 2021 • Statistik Utama Gaji & Upah, 2021
[1,9]	Pendapatan faktor diterima dari luar negeri adalah pendapatan yang diterima dari negara lain di dunia dalam bentuk pampasan pekerja yang diperolehi oleh residen yang bekerja di luar negeri. Ia juga merangkumi pendapatan pelaburan yang diperolehi daripada pelaburan langsung, pelaburan portfolio dan pelaburan lain di luar negeri oleh syarikat residen. Sumber data: • Perangkaan Imbangan Pembayaran, 2021 • Penyiasatan Pendapatan, Perbelanjaan Isi Rumah dan Kemudahan Asas, 2022
[2,2]	Bahan mentah komoditi domestik adalah input perantaraan bagi aktiviti pengeluaran. Aktiviti pengeluaran menerima pendapatan daripada pembekalan komoditi kepada industri lain dalam ekonomi domestik. Sumber data: • Jadual Input-Output Malaysia, 2021

Sub matriks**Penerangan****[2,3]**

Penggunaan terhadap komoditi domestik oleh isi rumah adalah penggunaan barangan dan perkhidmatan domestik oleh isi rumah. Isi rumah diklasifikasi mengikut lokasi geografi, kategori pendapatan dan kategori etnik.

- Jadual Input-Output Malaysia, 2021

[2,6]

Pembentukan modal kasar bagi komoditi domestik terdiri daripada pembentukan modal tetap kasar dan perubahan inventori bagi komoditi domestik.

METODOLOGI

Penilaian

MPS dinilai pada harga semasa serta aliran barangan dan perkhidmatan dicatatkan pada harga asas kerana ia adalah penilaian yang homogen.

Kaedah penyusunan

Terdapat dua (2) pendekatan digunakan dalam penyusunan MPS iaitu *top-down approach* dan *bottom-up approach*. MPS bagi Malaysia menggunakan kaedah *top-down approach* di mana penyusunan MPS dimulakan pada peringkat makro. Nilai yang diperolehi daripada matriks yang telah seimbang pada peringkat makro digunakan sebagai jumlah penanda aras untuk penyusunan matrik di peringkat mikro. Pendekatan *top-down approach* dipilih kerana ianya selaras dengan statistik yang telah diterbitkan.

Kaedah penyusunan matriks serapan komoditi mengikut komoditi

Jadual simetri matriks serapan komoditi mengikut komoditi pada harga asas disusun berasaskan daripada Jadual Input-Output dengan menggunakan andaian teknologi industri. Fungsi pendaraban matriks digunakan untuk menjana matriks serapan komoditi mengikut komoditi daripada matriks serapan komoditi mengikut aktiviti dan pekali output bagi matriks buatan aktiviti mengikut komoditi bagi pengeluaran domestik pada harga asas. Jadual simetri matriks serapan komoditi mengikut komoditi diperolehi melalui fungsi pendaraban matriks berikut:

$$Z_{i,j} = \sum_{k=1}^n X_{i,k} Y_{k,j}$$

di mana,

$Z_{i,j}$ = matriks serapan komoditi mengikut komoditi bagi baris i dan lajur j,

$X_{i,k}$ = matriks serapan komoditi mengikut aktiviti bagi baris i dan lajur k; dan

$Y_{k,j}$ = pekali output matriks buatan aktiviti mengikut komoditi bagi baris k dan lajur j.

**Teknik
pengimbangan**

Pelbagai kaedah pengimbangan telah diaplikasikan bagi proses pengimbangan Matriks Perakaunan Sosial Malaysia. Antaranya termasuklah kaedah *calibration*, kaedah *cross-entropy* dan lain-lain kaedah pengimbangan yang bersesuaian bagi menyelesaikan ketidakseimbangan angka pembundaran antara pendapatan dan perbelanjaan.

TECHNICAL NOTES

CONCEPTS AND DEFINITIONS

Social Accounting Matrix

Social Accounting Matrix (SAM) is a detailed framework that portrays comprehensive data for an economy. SAM integrates both the economic and social statistics. In addition, SAM also presents linkages among the institutions in the economy, namely households, financial & non-financial corporations, government and the rest of the world. The balanced structure of SAM provides an important input information for fiscal analysis.

SAM is developed based on the policy interests and data availability for the purpose to analyze the relationship between economic and social statistics in Malaysia. The theme for SAM is income distribution.

Concepts

SAM shows the interdependencies among sectors in the economy within a single framework. The income and expenditure are represented by six main components of SAM as shown in Diagram 1:

Diagram 1: Main components of SAM

SAM is represented by a square matrix. The framework of SAM is design based on the following basic schematic (Diagram 2):

Diagram 2: Basic Schematic of Social Accounting Matrix

		<i>Factors of production</i>	<i>Production activities</i>	<i>Institutions</i>	<i>Consolidated capital</i>	<i>Financing</i>	<i>Rest of the world</i>	<i>Total Income</i>
	<i>i/j</i>	1	2	3	4	5	6	
<i>Factors of production</i>	1		Value added				Factor incomes	Factor incomes
<i>Production activities</i>	2		Raw materials	Consumption	Gross capital		Export	Demand
<i>Institutions</i>	3	Compensation of employees	Commodity taxes	Transfers and taxes	Taxes	Financing	Social benefits	Institutions incomes
<i>Consolidated capital</i>	4			Saving				Saving
<i>Financing</i>	5			Lending				Lending
<i>Rest of the world</i>	6	Factor payments	Import	Consumption	Balanced of capital accounts		Balance of income	Other countries income from Malaysia
<i>Total Expenditure</i>		Factor payments	Supply	Institutions expenditures	Investments	Financing	Other countries spending to Malaysia	

The incomes of each transaction are indicated as row (i) and the expenditures are represented by column (j). The corresponding row and column totals of the matrix must be equal, consistent with the fundamental law of economics that for every income there is a corresponding expenditure. The detailed SAM is balanced at micro level. SAM 2021 at macro level consists of a 10 by 10 dimension matrix. The structure of SAM 2021 is presented in Table A.

Households

Households in SAM consist of all resident households and non-profit institutions serving households (NPISHs). Since households is defined as institutional unit, it includes unincorporated enterprises owned by households and NPISHs.

Income Category

The monthly income range for compensation of employees is classified based on category as follows:

Category	Monthly income range , SAM 2021
<i>High</i>	<i>Greater than RM11,594</i>
<i>Medium</i>	<i>RM4,810 to RM11,594</i>
<i>Low</i>	<i>Less than RM4,810</i>

METHODOLOGY

Valuation

SAM is valued at current prices and the flow of goods and services is recorded at basic prices as it is the homogeneous valuation.

Compilation method

There are two (2) approaches in compiling SAM namely top-down approach and bottom-up approach. SAM for Malaysia adopts a top-down approach where the initial SAM was compiled at the macro level. The values obtained from the balanced matrix at macro level are used as control total for the compilation of matrix at micro level. Top-down approach was chosen as it aligns with the published statistics.

The compilation of commodity by commodity absorption matrix

The symmetrical table of commodity by commodity absorption matrix at basic price is compiled from the Input-Output Tables using industry technology assumptions. Matrix multiplication function is used to generate the commodity by commodity absorption matrix from commodity by activity absorption matrix and the output coefficient of activity by commodity make matrix for domestic production at basic prices. The symmetrical table of commodity by commodity absorption matrix obtained through the following matrix multiplication function:

$$Z_{i,j} = \sum_{k=1}^n X_{i,k} Y_{k,j}$$

where,

$Z_{i,j}$ = commodity by commodity absorption matrix for row i and column j ,

$X_{i,k}$ = commodity by activity absorption matrix for row i and column k ; and

$Y_{k,j}$ = output coefficient of activity by commodity make matrix for row k and column j .

Balancing technique

Various balancing methods have been applied in the balancing process of SAM for Malaysia. These include the calibration method, cross-entropy method and other appropriate balancing methods in order to resolve the imbalance rounding figures between income and expenditure.
